File No. 17366-B-1

Gentlemen:

B. F. Goodrich reports that a rare form of liver cancer caused the death of three employees in the polyvinyl chloride operation at their Louisville, Kentucky plant and that the cancers may have been work-related. OSHA and NIOSH are investigating these deaths and the circumstances surrounding them.

Until further information is available, you are reminded that New Jersey regulations include, among others, requiring compliance with the recommendations of the MCA Safety Data Sheets.

Very truly yours,

George B. Stanton, Jr., P.E., C.S.P.
Chief
Occupational Health
