SUBJECT BEAMA PAPER

REFERENCE CWR 12/21/73 Memo to REK et al
RAB 12/13/73 Memo to CWR

TO : C. W. Roos
B2SA

The subject paper entitled "Capacitor Askarels and The Environment" by H. A. Vodden has been reviewed per your request. Additionally, Scott Tucker and Ralph Munch have looked at the manuscript. We feel that the paper is excellent with the exception that it would help if the assumptions and logic behind the calculations on page 7 were spelled out in more detail. Ralph Munch will comment further on this point in a separate note.

We find that final residue levels predicted from these calculations for Aroclor 1242 and Aroclor 1254 are in agreement with experimental results from our feeding studies.
