SUBJECT: Storage of Blue Asbestos

Due to the highly hazardous nature of Blue Asbestos, we will not use this material in manufacturing. We would like to establish a collection point for the Blue Asbestos in order that we might receive credit.

Towards this end we should follow the following procedure: Bags identified as containing Blue Asbestos should be set aside by Manufacturing and collected until a sizable quantity has been obtained. Q/C should then be notified in order to place on this material a hold ticket. Pallet quantities should then be moved via material transfer tags to the parking lot salvage area.

Please be sure that a shrink bag is placed over each pallet of material to prevent water absorption during storage.

Once a significant quantity has been accumulated in the parking lot area, Purchasing should be notified in order that the proper credit can be arranged.
