David Bayliss and Ed Baker will visit us as planned on Tuesday, April 8. Dr. Baker is head of the Biometric Branch of NIOSH. David Bayliss is his assistant. They will arrive somewhere between 9:30 and 10:00 A.M. here at the "B" Building, and we will meet in Room 336. After lunch, we will go to the Krummrich Plant for a review of records and a tour of the Aroclor Department.

Their intent during this visit is to determine if our records are sufficient in detail to perform an epidemiological study of the Krummrich Plant. David Bayliss informed me he would need records back to the early '40's.

Our meeting here in the morning will give us a chance to review with them the progress we have made in our own study, and give them a looksee at some of the personnel records that we have out here. David Bayliss indicated it is still possible that they may not make the study. It appears to be up to us that such a study is not needed.
