

Dear ECHA

As to European Chemicals Agency (ECHA) Regulation Draft (published c
In the electric heaters manufactured by our company, namely, self-regula
The proposed regulations is just similar to the debate over whether to co
Nuclear power has outstanding performance.it is considered necessary f
A series of regulation proposal by ECHA is just close to that is. However

Again, I have to say,

"it is clearly wrong to target all organic fluorine compounds."

Could you review again? I do judge that the proposed regulation will
weaken European Economy, inevitably.

on February 7th 2023), I have to say that the proposed regulations are too crude. Heating heaters, it is not a substitute for fluoropolymer. As to proposed regulations, to continue or stop nuclear power generation. For human beings because of its efficiency, however, on the other hand, the danger, it is clearly wrong to target even fluoropolymer.

Who decided to impose strict regulations even on fluoropolymers? What you are able to mention that the alternative material was considered by a person v

ers associated with its operation must be eliminated at all costs for survival of ma

doing is clearly wrong, in other words, just failure, just mistake, just blunder and who had no knowledge of electric heaters. Could you please let me speak directly

nkind.

etc.

with the person in charge who considered the alternative produc
