

October 27, 1976

Mr. Mel Birch
Younger Laboratories
123 Cliff Cave Road
St. Louis, Missouri 63129

Dear Mel:

Please initiate the final feeding phase of the following tissue residue accumulation/depletion studies:

Y-75-266	MCS 1558	trichlorodiphenylmethane
Y-75-267	MCS 1560	dichlorodiphenylmethane
Y-75-268	MCS 1826	chlorodiphenylmethane

These studies will be performed in accordance with the procedures enclosed, with animals to be sacrificed at the indicated times. Tissue samples will go to Orville Hicks for analysis.

Analyses of tissues from the pilot feedings in these studies indicate that levels of 50 and 500 ppm in the diet should be used in the final feeding phase of the studies.

Sincerely,

M.W. Stevens, PhD
Senior Toxicologist
