OSHA EMERGENCY TEMPORARY STANDARD FOR ASBESTOS

In addition to the PEL change from 2 F/cc to 0.5 F/cc (8-hr. TWA) the ETS requires before December 5, the institution of a training program "for all employees exposed....in excess of" the limit. Personnel monitoring here indicates that we do not have any employees who are so exposed. Thus, we are not subject to the training requirement of the ETS. Regardless, we recommend that our pre-existing Engineering Department safety practice, EDS-7.6, and the training film currently used both be structured as necessary to incorporate the elements of the training program stipulated in the ETS; copy attached.

The training program work does not need to be completed by December 5. However, EDS-7.6 should be revised immediately to reflect the new permissible exposure limit.

Let me know if we can be of assistance.
