Dear Mr. McDaniel:

Enclosed are the monthly dust count analyses for the King City operation. Weather: fair, cold, brisk wind from the north west. Included in the sampling are two set of counts taken in the RG-244 circuit. Operators in both packaging areas were equipped with respirators and the areas were isolated with closed doors. Standard Grade 210 powder was peing packaged, and the palletizer was in use. There was no visible dust leakage from the overhead ducts. The phase microscope we ordered from Unitron has been back ordered until approximately March 1. We have not ordered any sample collecting apparatus, paper, or oil pending information from you regarding exactly what to purchase.

Very truly yours,

D. S. Kamens
