Subject: AEI Today: America's imminent production boom

. America's imminent production boom

AEI's daily publication of independent research, insightful analysis, and scholarly debate

Twenty20

America's imminent production boom

James Pethokoukis | *The Week*

Some researchers think the widespread and innovative use of big data, artificial intelligence, and robotics in areas such as health care, education, and the service sector could eventually boost productivity growth high enough to achieve overall 3 percent growth. This tech wave may be unstoppable as long as government doesn't do something profoundly dumb, such as banning or taxing new technologies.

Reuters

The military options for North Korea

John R. Bolton | *The Wall Street Journal*

Nuclear proliferators happily exploit America's weakness and its short attention span. They exploit negotiations to gain the most precious asset: time to resolve the complex scientific and

technological hurdles to making deliverable nuclear weapons.

Twenty20

Scientific facts should supercede ideology

Benjamin Zycher | Washington Examiner

The leftist environmentalist groups' plea — more government subsidies for more expensive energy, less for cheaper energy — is highly problematic. It is yet another example of ideology masquerading as analysis, premised on energy and climate assumptions vastly at odds with the evidence.

Twenty20

Ignoring the lessons of effective presidents

Michael Barone | Washington Examiner

Donald Trump too often confides in the world things that great presidents such as Roosevelt, Eisenhower, and Reagan would have told no one else. We know his mood at 6:23 a.m., his reactions to hosts and guests on Fox & Friends, and how miffed he is with the attorney general.
