Subject: Information on Asbestos

From our storage files I located, and am sending you herewith technical information brochures from a number of different asbestos fibers. The Quebec Standard Asbestos Machine was used to determine gradings.

I also located, and am sending herewith the bills, purchase orders, and invoices for 1970 and 1971. These were all filed under Asbestos Corporation of America, our single supplier at that time. I checked under the names of all the other suppliers mentioned in the foregoing brochures, but found no more bills. Asbestos Corp. probably sent us different brands from Canada

I was fortunate to find this much information because most files prior to 1972 had been deliberately destroyed as outdated. I hope this will be helpful. F. H. M.
