Dear Tom:

I have one comment to make concerning your May 20 "News Flash".

I believe that in addition to our people stressing the density control of sprayed fibers (whether with or without asbestos), they should in a positive manner also emphasis that the method of fiber application lends itself to air-borne dry material. Cafco may have resolved the asbestosis problem, but I don't believe they have solved the matter of putting solids into the air.

Sincerely,

Thomas P. Feit

TPF/jac
