D. M. Phillips - T/26

This is in reply to your correspondence dated December 13, 1979, subject -- Kaylo litigation.

It has been known for long periods of time that the water of hydration can be driven off of asbestos leaving a material known as forsterite In the Kaylo process the asbestos does not become forsterite and remains asbestos. This is borne out by the fact that we have cases of asbestosis both as Berlin and Bloomington.

No doubt Mr. Bishop means well; however, there is little doubt that Kaylo dust can cause asbestosis both in man and in laboratory animals.
