

MONSANTO COMPANY
SPRINGFIELD, MASS.

November 30, 1978

TO: _____

Since your work history record shows that you worked in the Resinox Manufacturing Department sometime during the period 1941 - 1959, your X-rays are being included in our special health study program. This program is the one described in a recent bulletin board notice to Monsanto-Springfield employees.

If you have any questions with regard to this effort, please contact me.

W. E. Nessell, M.D.

William E. Nessell, M. D.

WEN/SEN

Monsanto

MONSANTO PLASTICS & RESINS CO.
800 N. Lindbergh Boulevard
St. Louis, Missouri 63186
Phone: (314) 694-1000

The results of the recent study on chest X-rays of employees who worked in the Resinox area have been received.

I am pleased to inform you that your X-rays showed no signs which may be indicative of effects associated with asbestos exposure.

The results of the recent study on chest X-rays of employees who worked in the Resinox area have been received.

Your films were ~~sent~~ ^{judged} by the consultant to be technically inadequate for this evaluation. Please call me at Ext. 2604 for an appointment to discuss this.

NOTICE TO MONSANTO-SPRINGFIELD EMPLOYEES

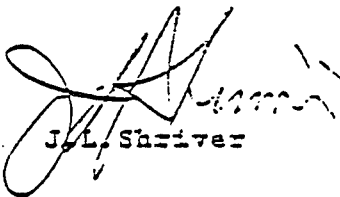

Recently, you were informed that Monsanto Springfield's Medical Department would be starting a special health program for employees who might have come in contact with an asbestos additive raw material used in the Resinox Manufacturing Department. This update is to inform you of the progress made to insure the health and safety of those employees.

You should know that we have identified all those wage employees in the plant who worked in the Resinox Manufacturing Department (1941-1959). Also, we have similar information for the salaried personnel but the salaried information may not be all inclusive due to the manner in which salaried work histories are recorded. Therefore, all those employees (wage and salary) who have been identified as being part of the special health program will be notified by plant mail by December 15. Any employees not contacted by December 15, but who worked in Resinox during the study period (1941-1959), should contact Dr. Nessell, extension 2604, to insure their inclusion in the study.

Also, we have secured the services of a recognized medical expert in the field of asbestos-related illness. At his direction, we have collected existing x-ray film on all the identified employees and forwarded these to him for his careful analysis. Any further medical work and recommendations will be based on the results of his findings and his expert opinion.

Again, this effort is part of Monsanto-Springfield's continuing program to insure the health and safety of its employees.
