SUBJECT AROCLOR - WILDLIFE

REFERENCE :

TO : Michael Pierle
TSD - W. G. Krummrich Plant

The analysis of all W.G.K. sediment samples so far received has been completed and the results are shown in the following table.

All sediments extracted contained heavier EC/GC active materials; however, the retention times and general peak shapes did not exactly match the EC fingerprints of either Aroclor 1254 or 1260. In two cases, OR Log Nos. 77 and 78, significant amounts of the heavier materials were present with respect to the Aroclor 1242 content. These heavier materials are most probably a mixture of Aroclor 1254 and 1260 whose isomer distribution has been altered.

W.G.K. Sediment Samples

<u>OR Log No.</u>	<u>Sample Identification</u>	<u>Date Taken</u>	<u>Amount Found (Reported as Aroclor 1242)</u>	<u>LEVEL</u>
77	Mississippi River Downstream	8-25-69	106 ppm	7.2'
78	Mississippi River Monsanto Dock	8-25-69	1825 ppm	
79	Mississippi River Upstream	8-25-69	41.6 ppb	
92	Mississippi River Upstream	10-10-69	1.10 ppb	4.2'
93	Mississippi River Monsanto Dock	10-10-69	4.60 ppm	
94	Mississippi River Downstream	10-10-69	3.19 ppm
