CALIFORNIA STATE ARCHIVES RESEARCH

I have completed the research at the California State Archives in Sacramento. The files are not catalog searchable except for main headings. In general, most of the material I reviewed were files relating to workmen's compensation or disability insurance. The files were far from complete with a lot of correspondence that seemed to be missing. But that is the nature of old records. There were very few actual references to asbestos. Parts of three files were copied and discussed below. I believe research at the Archives is finished.

1. From the Division of Industrial Safety were some yearly (or fiscal yearly) tabulations of occupational diseases caused by various agents. Asbestos was the cause of 2 cases in 1939, 1 case in 1941, 5 more in 1941, and 3 cases in 1942. *State of the Art in California*

2. An employee of the Department of Public Health wrote a memo after attending a course, "Medical and Biological Aspects of Air Pollution" in 1960. Part of the course was a presentation by Dr. H. L. Falk from the University of Southern California on lung cancer and air pollution. Asbestos is not mentioned in the memo. I do not know if it would be worth trying to track this course or presentation. It may not have mentioned asbestos and we do not know who was at the course. *NA*

3. The bulk of the copied material was a transcript of a 1935 hearing before the Insurance commissioner of the State of California dealing with surcharges for workmen's compensation insurance for silicosis and asbestosis. Various insurance companies, industry trade organizations and other companies gave testimony at the hearing. In addition, many insurance companies and other companies tried to waive the liability for silicosis and asbestosis as an endorsement to the policies. This was disallowed in a 1937 memo from the California Inspection Rating Bureau. However, many companies submitted endorsement forms. Barry recognized one company, California Portland Cement Co., as a defendant in cases. There may be other companies that may be defendants, or they may be predecessors to present day defendants. Lastly, there is a 1937 list of pneumoconiosis surcharge rates for various industries.

2 FIRST HEARING
3 ON THE APPLICATION FOR SILICOSIS SURCHARGES
4 MADE BY
5 CALIFORNIA INSPECTION RATING BUREAU

6 BEFORE

7 SAMUEL L. CARPENTER, JR.,
8 Insurance Commissioner of the State of California

9 FRIDAY, NOVEMBER 15, 1935,
10 TEN O'CLOCK, A. M.

11 --ooOoo--

12 Meeting is called to order by
13 Insurance Commissioner Carpenter.

14 MR. CARPENTER: This hearing has been called pursuant
15 to a written request of the California Inspection Rating
16 Bureau asking the Insurance Commissioner to approve sur-
17 charges in Workmen's Compensation Insurance rates to cover
18 the hazard of silicosis and asbestosis in certain industries
19 Sections 11730 to 11742 of the Insurance Code cover
20 the jurisdiction of the Insurance Commissioner in respect
21 to Workmen's Compensation Insurance rates and rating sys-
22 tems and classifications, and this hearing is called
23 pursuant to the requirement of Section 11734.

24 Because of the grave importance of the subject, it is
25 not the intention of the Commissioner to make an immediate
26 decision upon the question involved, but it is his disposi-
tion to allow all parties at interest reasonable time to

1 present their views and such information as is available
2 to assist him in arriving at a proper adjudication of the
3 matter.

4 We realized on account of the broad scope of the
5 request and the number of groups and industries affected
6 by the proposed change that any system of notification
7 might not reach all persons interested. However, every
8 reasonable effort has been employed to reach as many
9 persons as possible by notice and newspaper publicity.
10 We realize that notices did not reach some of you until
11 a very few days before the date of meeting and that
12 therefore it is not to be expected that you will be present
13 here today equipped to discuss in detail all of the condi-
14 tions appertaining to the question at hand. Many
15 requests have been received for postponement of the hear-
16 ing based upon insufficiency in the time element.

17 We feel, however, in holding this hearing and
18 allowing the California Inspection Rating Bureau to
19 present its request here backed by the data it has com-
20 piled that a record may be made here which can be avail-
21 able to interested parties for more mature discussion at
22 a subsequent or adjourned meeting.

23 We also believe it would be helpful to hear those
24 who are prepared today to speak upon any phase of the
25 subject. Some fifty or more persons have indicated a
26 desire to be heard and those of this number who represent

1 interests directly affected will be given such opportunity
2 as time permits. Because of the large number we are
3 going to request a consideration for all those who desire
4 to be heard and ask all speakers to be brief.

5 Those who by limitation of time may not have an
6 opportunity for oral presentation, or those desiring to
7 supplement oral presentation, are invited to submit to the
8 Commissioner in writing any comment which they are to
9 present.

10 I believe at this time it would be advisable to take
11 a roll of those present and the interests they represent
12 in order that the Commissioner may advise them of future
13 meetings or proceedings. A roll will be passed among
14 you with the request that you print your name, address,
15 official capacity and industry or group represented.

16 To save time and permit the greatest convenience to
17 those present, it is requested that recognition of the
18 chair be first obtained before speaking, and that all
19 remarks or questions be directed to the chair.

20 I will ask the secretary to pass these roll slips
21 out. You may sign them during the progress of the meeting.

22 I believe it would be probably the best order of
23 procedure to ask the California Inspection Rating Bureau
24 at this time to present the matter to this gathering. I
25 believe Mr. Burbank is representing the California
26 Inspection Rating Bureau. At this time, Mr. Burbank, I

1 will ask you to present the matter.

2

3

MR. DANIEL W. BURBANK
Representing California Inspection
Rating Bureau.

4

5

6 MR. BURBANK: Mr. Commissioner, I will ask the
7 indulgence of those in the back of the room. If you don't
8 hear what I have to say, if you will raise your hand I
9 will try to raise my voice.

10 Workmen's Compensation in this state is established
11 under a constitutional amendment which is very specific
12 in its statement of the objectives that are to be obtained
13 in every phase of that subject. It is very plainly
14 stated in that constitutional amendment that the legis-
15 lature shall provide for adequate insurance coverage.

16 Pursuant to that mandate, the legislature in 1915
17 adopted what was then known as Section 602 (b) of the
18 Political Code, that is, those of the sections of the
19 Insurance Code mentioned by the Insurance Commissioner,
20 which required him to approve rates that are adequate for
21 all compensation carriers, and that law requires that
22 all compensation carriers collect, charge and collect,
23 those rates. That is what is known as the minimum
24 rate law. It is an anomaly in business but it has an
25 excellent reason behind it.

26 The sole object of insurance for workmen's compen-

1 sation is to make certain that the benefits which the
2 law gives to injured workmen, and to their dependents when
3 they are deceased, will be paid without question. When
4 compensation was initiated in this state there was no such
5 regulatory law. Insurance carriers without a sufficient
6 background for charging rates indulged in competitive
7 rate cutting. Some went broke, and the legislature was
8 called upon to do an entirely unconstitutional act by the
9 then Governor Hiram Johnson, to appropriate money from the
10 State Treasury to pay the dependents and benefits to the
11 injured to which they were entitled and which the
12 insurance carriers couldn't pay them.

13 Now then, there is simply one objective in this
14 scheme, and that is to provide and make certain that every
15 workman who is injured and every widow and every child
16 left of a deceased workman shall receive that to which he
17 is entitled. Workmen's compensation is peculiar in
18 this, that the benefits which the policy provides, which
19 the contract provides shall be paid, are not paid to you
20 employers who buy it but are paid directly to the benefi-
21 ciaries. You put up the money, the insurance carriers
22 administer it, and the workmen who are injured and those
23 other beneficiaries under the workmen's compensation law
24 receive the benefits. The insurance carriers are
25 directly responsible and liable in every aspect to the
26 beneficiaries and to the workmen themselves.

1 Now, one word about the California Inspection Rating
2 Bureau. With the duty imposed upon the Commissioner under
3 this minimum rate law, necessarily statistics and actuarial
4 computations must be continually acquired and continually
5 conducted. That requires a very large force, and upon the
6 initiation of this law the then Commissioner required the
7 companies to join in supporting an organization, a fact
8 finding organization and statistical organization, for the
9 purpose of compiling the experience as we found it under
10 the compensation law for the purpose of making rates that
11 are fair and adequate. That is the California Inspection
12 Rating Bureau, and it is nothing more than a fact finding
13 body which provides the Commissioner with the data upon
14 which he can carry out the duty which is imposed upon him
15 under Section 602 (b), the minimum rate law.

16 Now, we have had come upon us in the last two years
17 a new problem. It is not a new liability, technically
18 speaking, but it is new practically speaking, and we must
19 for the purpose of this discussion consider the problem of
20 silicosis and asbestosis as though there had been, practi-
21 cally speaking, no liability therefor prior to January 1,
22 1933. That is the way it must be approached because prior
23 to that time for eighteen years there had been, relatively
24 speaking, no cases or so few cases that the effect upon the
25 cost to industry was entirely insignificant.

26 I have had a search made of the records of the

1 Industrial Accident Commission and I think I am safe in
2 saying that not over ten cases were adjudicated, and we
3 have had the records searched for claims and I am advised
4 that only seventeen claims during the five years from
5 1928 to 1932 inclusive were made. With respect to these
6 two risks, the cost of those claims was estimated in the
7 neighborhood of \$80,000, whereas the total amount of
8 losses over those five years - correct me, Mr. Froberg,
9 if I am not correct, was \$57,000,000.

10 MR. PROBERG: \$58,000,000.

11 MR. BURBANK: \$58,000,000, less than one-tenth of
12 one per cent. Now, our rates ordinarily speaking are
13 based upon the experience or records we have acquired of
14 the losses in each of your industries over the years.
15 Each year they are readjusted upon the basis of the five
16 years preceding. It is therefore apparent that the
17 so-called manual or base rates have not up to this time
18 reflected the cost of silicosis to any significant degree;
19 it has hardly an appreciable effect. We then approach
20 the subject as though an entirely new liability had been
21 imposed which we must determine with respect to its future
22 cost.

23 Now, gentlemen, I don't need to tell you that this
24 hazard of silicosis is quite unique. Two or three items
25 in that respect will obviously differentiate it from
26 anything that in the run of the years has fallen within

1 the scope of workmen's compensation. As you well know,
2 the workmen's compensation scheme is in its entirety
3 based on insurance principles. You also know that
4 except for these two risks, silicosis and asbestosis,
5 all hazards under workmen's compensation accrue at a
6 given time; they are susceptible of having their cost
7 or potential cost determined in a relatively short time
8 after they occur. Section 602 (a) of the Political
9 Code regulates the reserves which must be carried on
10 compensation, and those reserves are only required to
11 be held for three years. I mention that only to show
12 you how nothing in connection with any such extended
13 exposure which comes from silicosis has ever been con-
14 ceived in the laws prior to practically the present time.

15 I must summarize these distinctive features of
16 silicosis. First, it is rarely disabling until fifteen
17 to twenty years of exposure. It predisposes to tubercu-
18 losis, produces a lingering and long disabling illness,
19 it is insidious, it is incurable. No statute of limita-
20 tions runs against a claim until an employee is both
21 entirely disabled from work and knows that his disability
22 was caused by silicosis, by breathing the dust. There-
23 fore, we are confronted with establishing the cost of
24 something which projects itself into the future, which
25 is the result of exposure over a period of years, and
26 which historically speaking is of very recent origin.

1 Now, the proposal which we have made to the
2 Commissioner is necessitated by virtue of the fact that
3 we must under the law collect adequate rates. We have
4 no source from which to pay benefits to injured men
5 except premiums that are paid in to us. The sole diffi-
6 culty is to determine how much each industry should pay
7 and how they should be divided and in what amounts. I
8 might say that our premise included not only the necessi-
9 ty both from the Commissioner's point of view and from
10 our own and from your own and the injured man's point of
11 view, if you please, of an adequate fund to pay these
12 benefits, but the second point in our premise is this:
13 With this unique hazard, with it coming on you, as is
14 well known of the history of claims cost in the east,
15 we have approached this thing from a non-profit basis.
16 We approached it on the basis of pure cost and I will
17 elaborate on that shortly. One word, and I am coming
18 to the basis of this proposal.

19 It is based, of course, upon all the evidence that
20 we could secure with reference to the probable cost. We
21 know and we have the advantage of the somewhat limited
22 experience because not over ten years has gone by while
23 this has been a problem in eastern states, the somewhat
24 limited experience of the several eastern states. Before
25 that for many years South Africa has had this problem, and
26 if my memory serves me right, I have the figures in my

1 brief case, since 1902 I believe \$62,000,000 has been paid
2 out in South Africa in silicosis claims, and it is estimated
3 that \$34,000,000 will be needed to discharge the liabilities
4 now accruing. Probably it is significant that the
5 states of both Pennsylvania and Massachusetts have made
6 official investigation of this subject at a very
7 considerable cost and have published large reports. I
8 hold here the report of the committee appointed by
9 Governor Pinchot which, as you know, on occupational
10 diseases expressly excluded silicosis because it was
11 considered that the cost would be too heavy for industry
12 to bear. If my memory serves me right, \$2,000,000 a year
13 was considered as an initial step in Massachusetts in
14 the granite industry and in the foundries. The subject was
15 debated back and forth for several years, and finally
16 the official report of the Special Industrial Disease
17 Committee of Massachusetts, after the authority there
18 had heard the subject for more than a year, has this to
19 show: In November, 1932, the insurance companies filed a
20 rate of \$5.00 per \$100.00 of payroll for all stone
21 cutting risks and provided that for risks found to have
22 an extreme occupational disease hazard there would be an
23 annual supplemental occupational disease rate of \$300
24 for each person employed. Based on the average annual
25 wage of \$1500, that is \$20.00 per \$100.00 of payroll.

26 This rate, excessive as it may seem, appeared to

1 be justified by the evidence, and indicates the extent to
2 which losses in the industry have increased since the
3 decision above mentioned, the decision above mentioned
4 being one made in 1927 in the famous Patrick Sullivan case
5 which held these cases compensable. The approval of this
6 was delayed for nearly a year in the hope that future
7 experience would render such an extra increase unnecessary.
8 It was approved as of December 1, 1933, subject to the
9 condition that the approval will be withdrawn on March 1,
10 1934, if at that time a merit rating plan has not been
11 established for this industry. It proceeds to say the
12 merit rating plan would be a plan by which employers
13 would receive credits for prevention work, something
14 that hadn't been worked out at the time. The \$300 per man
15 charge was put on in Massachusetts and the condition
16 there was obviously to compel action in that respect.
17 One word with respect to why we call these proposed
18 rates 'surcharges'. As you know, there is a very
19 extensive manual of compensation rates in this state,
20 devised for the purpose of recording the experience of
21 various exposures and hazards in various industries because
22 the basic idea, one of the basic ideas in making workmen's
23 compensation rates, following up the fundamental theory
24 of the law originally, is that each industry should pay
25 the cost of its own losses, and that is only possible if,
26 of course, records are kept of the losses of each industry,

1 and that is what the Rating Bureau's business has been
2 and continues to be. We call these 'surcharges' because,
3 as I explained to you heretofore, at present the rates
4 include no appreciable charge for this hazard, and this is
5 a new hazard; we are not certain of what the cost is going
6 to be ultimately in California. We have felt that the
7 major basic rate structure of the state should not be
8 complicated by this problem. We felt that any charge put
9 on for the purpose of meeting the cost of this particular
10 hazard should be separately set forth, and it is a part
11 of our proposal that not only shall it be a separate and
12 distinct charge for this hazard, but that in the future
13 separate experience will be kept for each industry and
14 records of all losses and claims and cost of every kind
15 reported so that there can be an allocation without any
16 question of comingling of data as to this particular
17 hazard. It is too serious to be treated otherwise. The
18 rates which are proposed are maximum rates, they are high
19 rates, and I blame no industry for being very seriously
20 concerned with the rates proposed, but ^{they are} based upon all the
21 evidence we can get, and if there is any other to be had
22 or if it can be supplemented we welcome it, they represent
23 the best ideas of our actuarial experience as to what we
24 can safely carry your load for, this proposed rate caring
25 for the beneficiaries of workmen's compensation who may be
26 injured through these diseases.

1 This rate is a maximum rate. Of course, we have to
2 fix a maximum. It is not the minimum, however. We
3 propose, upon the premise that we desire no profits what-
4 ever from the premiums collected from this hazard, we
5 propose concurrently with these charges and as a part of
6 the plan proposed to the Commissioner to provide for an
7 annual adjustment of the rates retroactively on the basis
8 of the annual claims experience developed in the various
9 industries; that is to say, immediately upon the expiration
10 of all policies issued in any given policy year, the Bureau
11 will tabulate the payrolls and losses for that policy year
12 and upon the showing of the experience for that year will
13 adjust retroactively the surcharges originally made for
14 that policy year to the carrier who will then make an
15 adjustment with its assured on the basis of the adjusted
16 rates.

17 Translated into plain English, that means this:
18 You buy a workmen's compensation policy today and you pay
19 a deposit premium for it. Monthly or quarterly you render
20 a statement of your payroll to your insurance carrier and
21 he sends you a bill for the amount of money that the appli-
22 cation of the rate to that payroll calls for. At the
23 end of the year, if you have not had a payroll which has
24 required all of the deposit, then you receive an adjustment
25 back. If by the application of the rate to your payroll
26 a larger sum of money is required in excess of what you

1 have deposited, then you pay something more.

2 By policy year, in insurance language, we mean
3 practically two years because it means that every policy
4 issued, we will say, during the year 1935, must expire
5 and of course they cannot all expire until December of
6 the following year.

7 Now, we propose to the Commissioner that the
8 surcharges, when fixed and as fixed for these rates, be
9 dealt with exactly as I have outlined and, as you know,
10 your premiums are handled now. In other words, if you
11 pay a surcharge for silicosis, then at the end of the
12 policy year period, when your payroll is completely
13 audited, if your industry has not required in its losses,
14 by its losses, in the cost of handling, the fund which
15 you have paid in, then that will be proportionately
16 refunded to you by each carrier to whom you have paid the
17 money. That is a cost scheme, but it starts with the
18 premise that we must have the money to meet as nearly as
19 can be determined the anticipated cost, otherwise the
20 law cannot be complied with. Otherwise we would be
21 gambling and we cannot gamble, we are not permitted to
22 gamble. The law would be defeated if we were permitted
23 to gamble, but this scheme will take care of itself by
24 adjustment each two years, and as experience has developed
25 the rates which the Commissioner will make as a result of
26 this proposal can be adjusted either as between industries

1 or as an individual industry. It is a matter of gaining
2 experience and at the same time playing safe so that there
3 can be no question but what the beneficent objectives of
4 the workmen's compensation law can be taken care of.

5 Let me emphasize this, that not one nickel of
6 profits out of these rates will go to the compensation
7 insurance carriers. They are in general but service
8 organizations, and in this respect the rating scheme we
9 propose will expressly provide that the money you pay in
10 will be held as a reserve for the purpose for which it is
11 paid. If it is not used by the industries, then it will
12 be returned.

13 Now, that undoubtedly means this: We cannot say to
14 each individual man that if your money isn't used by the
15 claims in your plant we will return it to you. We have
16 to have a spread over industries and you gentlemen will
17 have to police your own industries because one of the
18 major objectives of the workmen's compensation law is
19 prevention, and you know that prevention pays, and there
20 will have to be, I assume, some steps toward organization
21 whereby the industry as a whole will undoubtedly act to
22 prevent losses from these diseases, and if that is done
23 the problem will be in a major portion solved.

24 Now, in connection with this proposal we have also
25 proposed a scheme for so-called schedule rating. These
26 rates are not subject to experience rating, that is to say,

1 the experience of each plant. That is impossible, But
2 we do propose what is known in insurance as schedule
3 rating, that is to say, under a definite scheme provided
4 as part of the plan filed with the Commissioner, if any
5 given plant engages in what is known as good housekeeping,
6 if they segregate their dust exposed employees and do
7 certain specified and possibly engineering acts to prevent
8 their employees being disabled from this exposure, then
9 it is possible under this plan for them to immediately
10 reduce the initial charge as much as 40%.

11 Speaking of the experience of other states, I
12 failed to mention probably the most important source of
13 information we have which is Wisconsin. I will go back
14 to that just a moment and then I will be through.

15 Wisconsin has a great number of foundries, and in
16 connection with our proposal we filed the Wisconsin dust
17 disease loss experience. That is at the Commissioner's
18 office for you to investigate, and I will simply say that
19 the jump in losses after workmen, after ambulance chasing
20 lawyers became aware and after doctors became educated
21 in silicosis, jumped tremendously in Wisconsin as it did
22 throughout many other states, but the other states'
23 experience is not useful to us because in the main those
24 states permitted actions for damages, and as you well know
25 there are \$300,000,000 to \$500,000,000 in suits pending,
26 with over \$20,000,000 pending against the foundries of

1 New York State. That is of no use to us here because
2 it has no compensation experience.

3 Now, in Wisconsin, for the purpose of paying losses
4 alone, without any charges for expenses, the experience
5 showed what we call the pure premium, that is for losses
6 alone, for the years 1930 and 1932, the amount indicated
7 per hundred dollars of payroll were these figures:

8	<u>For Iron Foundries:</u>	\$1.60	in	1930
		10.10	in	1932
9				
10	<u>Steel:</u>	3.80	in	1930
		24.50	in	1932
11				
12	<u>Stone Cutting:</u>	4.90	in	1930
		15.90	in	1932
13				
14	<u>Quarries:</u>	9.50	in	1930
		19.17	in	1932

14 That is experience. Now, gentlemen, it is true that
15 in Wisconsin they went out on a campaign of medical
16 examination and developed a great many of these risks.
17 However, the facts are these: The available data included
18 includes that prepared by the National Council, that is
19 an organization nation-wide very much as our Bureau is
20 for California, in connection with the study of the
21 problem and the experience, dust experience, developed in
22 Wisconsin which has been made use of in other states.
23 The major portion of the Wisconsin experience covers the
24 foundry industry which nation-wide has contributed the
25 greatest number of cases, followed by the granite
26 industry, quarries, and so forth. The exhibits will

1 show the following: In Wisconsin, for foundries, in
2 1930, there was an average of one case reported for each
3 200 employees. In 1931, there appear one case for each
4 100 employees. By 1932, which was the peak year, there
5 was an average of four cases per 100 employees. These
6 averages are produced by taking the number of cases for
7 each \$1500 of payroll. In making the schedule of rates
8 we propose here, the Committee began at that point and
9 estimated for the foundry classification one case per
10 100 employees. New York, in making up their schedule,
11 took two per 100 employees, but took a smaller estimate
12 per cost of each loss. We set \$10,000 as being the
13 average claim and \$1500 as being the average annual
14 payroll per employee, which produces a pure premium, that
15 is, actual loss cost, of \$6.77 for the foundry classifi-
16 cation.

17 Now, there was practically no experience, no
18 reliable experience, on other occupations than foundries,
19 and it was necessary in making up these rates, and it
20 has been necessary everywhere in the Union, to determine
21 a relative degree of hazard between what was taken as
22 known cost in one industry and what was known as a hazard
23 in another industry, and that was done by a group of
24 engineers over several years' study and adopted in New
25 York and it is called the relating of the degree of risk of the basic
26 standard taken from the foundries to other matters. That

1 is a matter of judgment, and we don't know where to find
2 any better way of doing it. That is the way that it was
3 produced and that is the way that other rates, other than
4 foundries, here are computed.

5 Now, on the schedule there was included marble.
6 You have the schedule of rates, and classification No.
7 1803 included marble and stone cutting. That was an error
8 because marble is limestone and not silica and has been
9 eliminated. Also there was another error in classifi-
10 cation No. 3632; machine shops should not be inserted at all
11 and they have been entirely eliminated.

12 Without going into more detail, I want to add just
13 one thing. Insurances carriers here, the Rating Bureau
14 rather, supported by all of the insurance carriers of the
15 state, are trying to do that which the law, from the
16 Constitution down, says must be done. In proposing these
17 rates, high as they are, there is absolutely no element
18 of retaliation because we were unable at the last legis-
19 lature to secure a modification or a definition of the
20 benefits. That is a closed book as far as we are concerned.
21 We probably will have never anything more to do with that
22 subject at Sacramento. I merely make that statement due
23 to certain unfortunate newspaper comments which had no
24 foundation in fact with respect to our motive. This is
25 purely a business proposition, pure and simple.

26 In conclusion, I simply want to say that there is

1 but one objective to this whole matter and that is
2 protection. We want to give you protection at actual
3 cost and without profit. We have gathered all of the
4 evidence that we can find on the subject. We believe
5 that what we have proposed in the way of rates are neces-
6 sary for protection, and we have suggested a plan whereby,
7 if our estimates are wrong, you will get your money back
8 provided your industry as a whole so proves. On the
9 other hand, don't forget that there must be money to pay the
10 claims of injured workingmen and death beneficiaries, and
11 we are trying to work this out on a basis as fair and
12 equitable as possible and we are as open minded as can
13 be on the subject.

14

15 MR. CARPENTER: Will anybody else speak for the
16 Bureau, Mr. Burbank?

17 MR. BURBANK: No.

18

19 (Ten Minutes Recess.)

20 Meeting is called to order by Mr. Carpenter.

21

22 MR. CARPENTER: We will now proceed by permitting
23 those who have signified their intention of addressing
24 this gathering today upon the subject in question to
25 have that opportunity. I think it would probably be
26 better and conserve time and give greater opportunity to

1 all who wish to be heard, to take this matter up by
2 industries. The mining industry, so we are informed by
3 letters and communications, is represented here today by
4 the organization of California Metal and Mineral Producers
5 Association, Mr. Brown, Dr. Kern and Mr. Searls, I believe,
6 among others, representing that particular association.
7 Have you decided among yourselves which one you want to
8 address this meeting?

9 MR. SEARLS: Mr. Chairman, I suggest Mr. Searls,
10 (myself), Mr. Brown and then Dr. Kern.

11 MR. CARPENTER: Very well, we will give the floor
12 to Mr. Robert M. Searls, attorney for California Metal
13 and Mineral Producers Association.

14 MR. ROBERT M. SEARLS
15 representing
16 California Metal and Mineral Producers
17 Association.

18 MR. SEARLS: Mr. Commissioner, the gold mining
19 industry of California received the notice sent out by
20 your office very much as a bolt out of the blue, and in
21 the few days that it was possible for us to give some
22 study to this matter we compiled and I have presented to
23 you a memorandum of our points, and it is our desire, if
24 there is to be a continuance, that we be afforded the
25 opportunity to present additional information which has
26 come in since and will come in. I presume that will be

1 permitted?

2 MR. CARPENTER: That will be all right.

3 MR. SEARLS: I was very glad, Mr. Commissioner,
4 to have such a frank statement come from our friend Mr.
5 Burbank because we are able to realize now the basis on
6 which the Inspection Rating Bureau has proceeded.

7 In brief, they have proposed a surcharge on the
8 compensation rates of the gold mining industry of \$11.00
9 plus for underground, \$14.00 for mill and \$3.00 for surface
10 workers, based on the experience hazards of iron foundries
11 in Wisconsin, / ^{dusty} mines in South Africa, and some steel mills
12 in Massachusetts. What on earth the dust conditions in
13 those places have to do with the operating conditions in
14 the gold mines of California, I don't know. It made me
15 wonder as I listened to the presentation whether the
16 Inspection Rating Bureau had made any study of the dust
17 conditions of California gold mines, because the only
18 thing that can cause silicosis is dust. There is nothing
19 in their statement to indicate that they have made such
20 investigation and, as Mr. Burbank frankly stated, they
21 have proceeded on the assumption that there is no experience
22 and that there are going to be terrific losses incurred.

23 We are all willing to concur with Mr. Burbank, I am
24 sure, that the gold mining industry must stand its own
25 cost of its own hazards. We are willing to concur with
26 him that in the insurance business there can't be a separate

1 rate offered to every mine. On the other hand, I think Mr.
2 Burbank ought to concur with us that in all fairness the
3 California gold mine owner and operator should not have
4 his cost rated in advance on the assumption that the
5 losses which the insurance carriers are going to have to
6 pay will be those that were paid by iron foundries in
7 Wisconsin, in New York, and gold mines in South Africa,
8 and if I can demonstrate to the Commissioner the basic
9 reasons why that is not so, I think that the statistics
10 will amply corroborate me, such as we have.

11 In the first place, as I can show through Mr. Brown,
12 Secretary of the Metal and Mineral Producers Association,
13 who for twelve years was safety inspector of the Industrial
14 Accident Commission, the California gold mine in the past
15 twenty years has not offered a substantial silicosis
16 hazard, and I don't mean by that that there are not many
17 men employed in California gold mines who suffer from
18 silicosis or have suffered from it, but I do say the
19 condition is not due to the operating conditions in the
20 California gold mines.

21 The reason for that is that without exception, or
22 possibly with the exception of only a very few mines in
23 the desert country, not a substantial part of the mining
24 industry, the California gold mines are what is termed
25 wet mines. The dust does not fly around in the air under
26 natural conditions because there is too much water to make

1 it fly. In the second place, under the safety regulations
2 of the Industrial Accident Commission, during the past
3 fifteen or twenty years the use of water drills has been
4 mandatory. With the wetting down of muck piles and the
5 prevention of the spread of dust in drilling, that is
6 something that couldn't happen very well as it could in
7 the iron foundry. The same is true of the quartz mills.
8 This muck is hauled to the surface and there is no dust
9 to fly around and cause silicosis.

10 Those are conditions that obtain in the California
11 gold mines today, and it can be substantiated by the
12 simple proposition of taking a few dust counts, if the
13 Inspection Rating Bureau desire to do so.

14 I happen to represent the Empire-Star Mines Company
15 operating in Grass Valley and Nevada City. We have had
16 dust counts taken in our mines and we find the dust
17 count to be a negligible factor in the North Star,
18 Empire, Pennsylvania and Murchie - I believe those are
19 the principal properties operated by this company.
20 Similar counts, I have been informed, have been taken
21 on the Mother Lode and I am anxious to get the same to
22 furnish to the Commissioner, if you gentlemen have
23 them, which will substantiate this same condition.

24 Now, under those circumstances, what justification
25 is there for an assumption that a miner working in a
26 California gold mine is going to contract silicosis in

1 the same degree that he would contract it working in
2 a dusty foundry in the east somewhere or in the well
3 known very dusty mines of South Africa.

4 Mr. Burbank might very well ask me, "How, then,
5 does silicosis arise in California?" It arises,
6 Mr. Commissioner, largely because men employed in the
7 mines drive from place to place, and many coming into
8 this state are already suffering from silicosis acquired
9 in other communities and other countries. Is the
10 State Industrial Accident Commission going to assess
11 against the California gold miner the entire cost of any
12 disability resulting from silicosis contracted in that
13 manner? I suggest there is nothing in any decision
14 of the Industrial Accident Commission yet to justify
15 such an enterprise, and I judge the representatives of
16 the Commission themselves can speak for themselves as
17 to that fact. If the California mines are wet, if
18 the silicosis hazard is practically non-existent as
19 yet, then why should the Inspection Rating Bureau get
20 hysterical over the assumption that huge costs are
21 going to be assessed. I imagine that this hysteria,
22 as I have termed it, has arisen from the fact that
23 within the past two years since the decision of the
24 Supreme Court in the Marsh case, holding that the
25 statute of limitations doesn't begin to run until the
26 employee discovers he is suffering from the consequence

1 of silicosis, that they think that means there are going
2 to be big awards. I submit that it means nothing of the
3 kind, and because I feel that that is the most potent
4 factor in the whole situation, I had Mr. Brown make a
5 very careful investigation of the records of the Industrial
6 Accident Commission of a number of claims pending and
7 of the amounts of those claims and of the amount of pend-
8 ing settlements. He reports to me under authority of
9 Mr. Hyatt that^{of} a list of these claims which I have sub-
10 mitted in my brief here, and also Mr. Hyatt's estimate
11 of the amounts for which they can be settled today, the
12 total of those amounts is about \$10,000. The proposed
13 compensation surcharge on the Empire Mine alone at Grass
14 Valley would be \$140,000 a year, fourteen times what the
15 Industrial Accident Commission actuaries estimate the
16 total cost of settling all the claims that have been filed
17 today.

18 I will ask you if that isn't better evidence for the
19 necessity of the surcharge than the experience of iron
20 foundries in Wisconsin or mines in South Africa. I don't
21 claim any familiarity with the South African procedure
22 but I understand their mines are very dusty there, that
23 it is a foregone conclusion that the native labor that
24 are mostly employed there will contract silicosis in a
25 short time and that very high reserves have to be set up
26 for that reason.

1 While the carriers are entitled to be protected
2 against loss, the insured are entitled to see that the
3 rates do not exceed what is a reasonable reserve, and that
4 reasonable reserve should be based on California gold mine
5 experience and not on hazards which are non-existent in
6 California gold mines.

7 I submit therefore as a first basis for denying this
8 application that they have not shown the experience or any
9 basic facts upon which a proper surcharge could be based
10 if one were desirable. Furthermore, that the probabili-
11 ties, based on the experience of the last two years, - I
12 don't ask them to go back of that - don't indicate that
13 the insurance carriers are going to be called upon to
14 pay any large additional sums on account of silicosis.

15 I think, of all claims filed with the Commission,
16 a large percentage of them were filed by one attorney
17 largely as a result of some labor disputes, and a great
18 many of those were filed against a self-insurer. As
19 far as the carriers go, they need not weep in apprehension
20 over what that particular bunch of claims will cost them.

21 Now, the second point I want to make is that Mr.
22 Burbank, while he has stated that there was no intention
23 to charge a profit against the California gold miner, he
24 has not stated that the surcharge would not include this
25 famous 40% loading for overhead which is characteristic
26 of all compensation insurance rates. That 40% has been

1 broken down at various times and includes I think 17%
2 for the cost of acquiring the business. Just why the
3 compensation insurance company has to pay 17% for the
4 cost of acquiring the business in an industry where
5 insurance is mandatory, I have never been able to see.
6 But at any rate, if a 40% loading is justified in a
7 base rate, on what possible basis is it justified in a
8 surcharge rate, in the rate where the carrier goes to
9 the existing customer and says, "We are going to charge
10 you 14% more this year." Does that need 17% for acqui-
11 sition of business? Does it need a lot of additional
12 bookkeeping? Does it need additional overhead for
13 the president's salary and the rest of it? I submit
14 it does not, and unless Mr. Burbank is prepared to show
15 that is pure premium rate on which this proposed sur-
16 charge is based and does not include these overhead
17 factors which obviously have no relation whatever to it,
18 I say he has not sustained the position which he took of
19 charging a rate which would not yield a profit.

20 The third proposition I wish to make, Mr. Commissioner
21 is that the surcharge proposed here will be self-defeating.
22 The gold mining industry cannot stand a surcharge of 11
23 to 14% on its payrolls in order to meet these hazards
24 either now or at any future time. If the Commissioner
25 wishes to approve a rate which will put a large number of
26 mines in this state out of business, cut down the number

1 of employees and presumably increase the hazard as to the
2 rest, that may be within the scope of his desire, because
3 the smaller number of things you have, as a rule, the
4 less the spread of the average and the greater the
5 individual hazard.

6 While I think the working man himself is entitled to
7 some consideration, the imposing of a surcharge which
8 would necessarily result in the abandonment of marginal
9 operations and the discharging of hundreds of men cannot
10 be to the benefit of the individual worker.

11 I will come in a moment to the individual position
12 as far as health goes, but looking at it from the stand-
13 point of economics, there has to be a balance between
14 the rates, and that is possible. The reason that there
15 has to be a balance is that there can be no addition to
16 to the price of our product to meet these additional
17 costs. That price is fixed by law, it cannot be
18 increased. If you increase our payrolls from 11 to 14%,
19 you simply take it out of two places; you take it out
20 of the mine owner's pocket or you take it out of the wage
21 earner's wages.

22 From the standpoint of the mine owner, while there
23 has been a great increase in the production of gold in
24 California owing to the increase in price of gold, I have
25 no hesitation in saying from an intimate knowledge of the
26 situation that by far a greater portion of the increase

1 is marginal. That means the owner has invested his money
2 and he hasn't got it back and hasn't anything in his
3 pocket to pay anything out of the cost of operation.

4 As far as the working man goes, in view of his
5 present circumstances, I am willing to let the working
6 people speak for themselves as to whether they can stand
7 a reduction of wages to take care of this compensation
8 surcharge which is proposed.

9 Now, so far as the individual working man is con-
10 cerned, I am going to ask the Commissioner's indulgence
11 to let Dr. Kern of Jackson, who is familiar with the
12 Mother Lode where most of these cases have arisen, say a
13 word about the pathological conditions or medical condi-
14 tions which arise from silicosis when I get through, but
15 in general silicosis of itself is not going to greatly
16 increase the workingman's unhappiness. If the working-
17 man has contracted silicosis, it is just as dangerous
18 for him to work on a farm or in a factory as it is to
19 work underground in a California gold mine where the ore
20 is kept moist and where there is no more dust than he
21 would find in many surface occupations, not to mention
22 those mentioned by Mr. Burbank, and the compensation^{which}/he
23 is entitled to receive accordingly should not be increased
24 in the mining industry any more than it would be anywhere
25 else.

26 The California gold mines have been operated for

1 many years. Mr. Burbank says their experience claims
2 back of 1932 were so few in number and so small in amount
3 that they could be disregarded as an increased element
4 in cost, and if that be true I see no reason why the
5 same condition cannot be anticipated for the future. It
6 may be that a few new cases of legitimate silicosis
7 claims will arise and awards will be made, but I claim
8 the amount of these awards so far as charged against the
9 California employer is nothing which our present exper-
10 ience indicates will be excessive or cause undue alarm
11 in insurance circles.

12 For these reasons I submit, Mr. Commissioner, the
13 increase should be denied, but in order that you may be
14 perfectly well informed on this I think there should be
15 an adjournment of this whole matter and the mining
16 industry should be permitted to compile more accurate
17 statistics than it has already submitted to you, and if
18 there is any answer to those, my friend Mr. Burbank should
19 be permitted to make it, but I say his answer should be
20 something more than the experience of Wisconsin or South
21 African gold mines to justify these surcharges in
22 California gold mining compensation insurance.

23 May I ask Dr. Kern and Mr. Brown a question or two?

24 MR. CARPENTER: Mr. Searls, it is not with a view
25 to cutting you short but with a view to making the meet-
26 ing available to as many people as we can today. I would

1 like to suggest if we can get through with the individual
2 speaker in ten minutes it would be advisable.

3 MR. SEARLS: I just want to ask one or two questions.

4 These men can give you first-hand information.

5

6 (The following questions were propounded
7 by Mr. Searls and answered by DR. B. C.
8 KERN of Jackson, California.)

7

8 MR. SEARLS: Dr. Kern, how long have you been
9 practicing medicine?

10 DR. KERN: Twenty-six years.

11 Q. How long have you been practicing medicine in
12 mining communities?

13 A. Since 1909.

14 Q. That is in the Mother Lode principally?

15 A. Principally.

16 Q. How many men have you had occasion to examine
17 with reference to whether or not they had dust in their
18 lungs or evidence of silicosis?

19 A. I can't say off-hand but a great number. I
20 have made an exhaustive examination of eighteen men whose
21 cases were recently heard.

22 Q. Would you state to the Commissioner in your own
23 words what you think of this silicosis hazard from a
24 medical point of view.

25 A. In the first place, Mr. Commissioner, to the
26 medical man the use of the word silicosis seems a bit out

1 of line. Silicosis is one of a group of diseases under
2 the heading of pneumoconiosis which means organic or
3 inorganic material in the lung, irrespective of the amount.

4 I might say, with reference to recent claims, that
5 have come up, of the death cases, without exception the
6 primary cause of death as decided by myself and numerous
7 other physicians including the superintendent of the
8 sanitarium at Weimar, the primary cause of death was
9 pulmonary tuberculosis. In some few of those cases,
10 since this question has come up over the compensation of
11 claims for injuries sustained through inhalation of dust
12 in the mines, there have been to the best of my knowledge
13 out of fifty-seven cases, from thirteen to fourteen in
14 which pneumoconiosis was given as a contributory factor,
15 and a fewer number, I think not more than seven or eight,
16 where silicosis was specifically mentioned as a contribu-
17 tory factor.

18 Silicosis from a medical standpoint is a very
19 difficult problem. We do not know much about it. It is
20 hard to interpret. If radiographs of the chest are made
21 with proper technique, of the chest which contains silica
22 dust in any appreciable amount, and that chest is not
23 complicated by other chronic or acute pulmonary conditions,
24 we can make a diagnosis of silicosis. In the great
25 majority of the cases, some fifty-seven, I believe, the
26 chest films are so coated by pneumoconiosis and by signs

1 of pulmonary tuberculosis that it is impossible to say
2 that those men were suffering from silicosis.

3 MR. SEARLS: Where silicosis has occurred, Doctor,
4 is it your opinion that there would be --

5 DR. KERN: Would you mind using the word 'dust
6 disease'?

7 Q. Where you find dust disease occurring in
8 these gold miners, do you think there would be any
9 materially greater hazard of their incurring pulmonary
10 tuberculosis from continuing to work underground than
11 if they were to get outside employment, including hard
12 labor?

13 A. I think not. The existence of pulmonary tubercu-
14 losis is directly dependent on the infection of tuberculosi
15 bacillus. I seriously doubt whether we have more tubercu-
16 losis bugs floating around because of underground work.

17 Q. Do you believe that where you have those cases
18 that some of them might be caused by housing conditions
19 or living conditions?

20 A. We have a certain percentage of tuberculosis
21 among any group of men, but in the mining districts,
22 particularly around Jackson, housing conditions, especially
23 boarding houses, are so bad that in my opinion they are
24 the biggest single factor toward tuberculosis infection
25 among the miners employed in that district.

26 Q. That is not an industrial hazard?

1 A. I think not.

2 MR. SEARLS: That is all I wanted to ask. May I
3 ask Mr. Brown about three questions?

4 (The following questions were propounded
5 by Mr. Searls and answered by MR. G.
6 CHESTER BROWN, Secretary, California Metal
and Mineral Producers Association.)

7 MR. SEARLS: Mr. Brown, you are a mining engineer,
8 a graduate of the University of California?

9 MR. BROWN: Yes, sir.

10 Q. How many years were you employed by the
11 Industrial Accident Commission as Safety Engineer?

12 A. Twelve years; seven years as chief inspector
13 of mining and five years as deputy.

14 Q. How many of the California gold mines did you
15 have occasion to visit in the course of your employment?

16 A. I visited all operating properties, and the
17 larger properties two or three times a year.

18 Q. What were the regulations of the Commission dur-
19 ing the time you were employed as to wetting down the
20 underground workings?

21 A. Requirements in connection with dust, the
22 prevention of dust in mines, applied as to what we term
23 wet drilling and in dusty rock piles where muck accumu-
24 lates, or ore, so that there would not be any appreciable
25 amount of dust in the mine atmosphere.

26 Q. Were those regulations generally observed?

1 MR. BROWN: Yes, sir. If a condition arose in a
2 mine where we believed that they were not being
3 observed, there was an order issued to the effect and
4 it was corrected, but that condition only arose
5 occasionally.

6 Q. What is your opinion as to dust conditions in
7 the average California gold mine, the hazard involved
8 in this hearing?

9 A. As a rule, in California mines, except a few
10 desert mines, and incidentally there are no silicosis cases
11 apparently charged against the desert mines, the humidity
12 in the mine atmosphere and the water that percolates
13 in the mine workings prevents any amount of dust in the
14 mine atmosphere, and in my opinion from observation, and
15 I have worked not only in California but in lots of other
16 states in an experience of about thirty years, I will
17 say that I consider California mines are dust free com-
18 pared to mines in other states. Colorado has a good
19 condition, they have a similar condition to California
20 as to the type of mines, the humidity and moisture in
21 the mines. Nevada on the other hand is far from it and
22 the record from illness with dust disease in Nevada is
23 very poor.

24 Q. How does California compare with South Africa,
25 if you know?

26 A. In South Africa you have an entirely different

1 condition. You have the Kaffir labor there who in many
2 cases are infected with tuberculosis to start with. It
3 is a condition that has existed for a good many years
4 until the Government stepped in some years ago to
5 correct it. You cannot compare any South African mine
6 with a California mine. No figures will sustain it.
7 There is no comparison between the mines.

8 Q. Did you at my request make a record of all
9 cases filed in the Industrial Accident Commission of
10 California since 1932?

11 A. All those cases that were filed there in the
12 recent period, from that period on, were examined, yes, sir.

13 Q. Have you also examined the records set forth in
14 the brief I have filed with the Commissioner here?

15 A. Yes.

16 Q. Is that a correct transcript of the record as
17 you found it there? A. Yes.

18 Q. Who is responsible for the statement as to the
19 amounts of the pending settlements?

20 A. Mr. Hyatt and myself discussed each case.

21 Q. Who is Mr. Hyatt? A. Chief of the Claims
22 Division of the Industrial Accident Commission.

23 Q. And the total of those suggested settlements
24 was about \$10,000?

25 A. \$10,500.00.

26 MR. SEARLS: I think that is all. That is our case,

1 Mr. Commissioner.

2 MR. CARPENTER: Thank you, Mr. Searls. Are there
3 other representatives of other mining interests here who
4 desire to be heard at this time?

5
6 MR. O. H. GRIGGS
7 Los Angeles,
8 representing
9 Mining Association of the Southwest.

10 MR. GRIGGS: Mr. Commissioner, I am representing
11 the Mining Association of the Southwest. I have a
12 petition here asking that this hearing be continued and
13 that a subsequent hearing be held in the southern part
14 of the state, in Los Angeles.

15 MR. CARPENTER: That will be done.

16 MR. GRIGGS: Our mining industry there is an
17 important industry and this proposed surcharge rate
18 would abolish the mining industry in the southern part
19 of the state. We have had no time to prepare the
20 data for this.

21 MR. ARTHUR N. SWEET
22 representing
23 AUBURN CHICAGO MINING COMPANY

24 MR. SWEET: I sent you a letter requesting permission
25 to appear today. Our case has been presented so
26 thoroughly by Mr. Searls that on account of the hour I
waive the opportunity. I made up my mind not to come
today but all my men insisted that I come down as they

1 thought they would be out of a job and insisted that I
2 come.

3 MR. CARPENTER: Anybody else representing the
4 mining industry?

5
6 MR. HARRY SEARS
7 representing
8 State Wide Mining Industry Taxation
9 Committee.

10 MR. SEARS: I have filed credentials as Chairman
11 of the Mining Industry Taxation Committee of California.
12 I might say that Mr. Searls has very ably presented the
13 issues of the mining industry and the fact that this whole
14 subject of silicosis or air dust or whatever term may
15 be applied to it is decidedly a subject for more study
16 and for adequate information before any decisions may
17 be properly made. I came here under the conditions as
18 we knew them up to last night and am speaking for an
19 industry which has had scant time to prepare or even
20 knowledge of what it had to prepare for.. I was met by
21 the courteous opening of this, by your statement, Mr.
22 Commissioner, that you intended to make no findings
23 and that there would be further time granted, but I still
24 feel that, so you may understand somewhat of the lash of
25 past experience under which mining men have labored in
26 their experience with insurance, that I should make a
record as briefly as possible of a few of the remarks
I have prepared, and I will try to hold myself to the

1 time you have requested.

2 As Chairman of the Mining Industry Taxation Commit-
3 tee of California, I am speaking in the interest of the
4 mining industry. This Committee has been formed to
5 combat and check unsound taxes and other measures which
6 are or would be improper burdens upon the industry.
7 The Committee already comprises employers of approximately
8 6,000 men, representing wage totals of from \$25,000 to
9 \$30,000 per day or approximately \$9,000,000 to \$11,000,000
10 annually.

11 The greater part of this employment is in localities
12 and districts where if anything occurred to throw these
13 men out of work there would be no other industries to
14 absorb them. It can be conservatively estimated that
15 these 6,000 men directly support in excess of 20,000
16 dependents and indirectly contribute largely to the
17 support of many more thousands engaged in merchandising
18 and other lines of service in the various mining
19 communities.

20 The greater part of these men of the mining industry
21 are employed in ore milling and underground mining
22 operations and therefore the proposed insurance surcharges
23 would mean an increase in premium cost to the employers
24 of about \$3,000 per day, or an additional cost of more
25 than \$1,000,000 annually. May it be understood that
26 these figures do not represent the total mining industry

1 or the total costs, but they are representative of the
2 effect on the entire industry in this State.

3 The present cost of compensation insurance to mining
4 operators in California is a direct and serious payroll
5 tax which already adversely affects the volume of labor
6 employed and which under the proposed surcharges would
7 force many operators either to greatly curtail the volume
8 of their labor or to reduce the rates of wages, or to
9 abandon their operations and discharge their men. There-
10 fore, in speaking for the employers of these men, I speak
11 also for the men employed, for their daily rates of pay
12 and perhaps their very jobs are at stake.

13 Speaking for these employers and these men, I there-
14 fore protest this entire procedure and this hearing, and
15 protest against any increase in insurance rates affecting
16 surface or underground mining or milling for the following
17 definite reasons:

18 1. This hearing has been called and is being held
19 without proper, adequate or equitable notice to the
20 employers who would be directly affected by the proposed
21 increase or surcharges in compensation rates. Mere
22 reference to the classified telephone directory of San
23 Francisco alone would have provided a mailing list of
24 approximately eighty individuals and corporations en-
25 gaged in mining. They were not advised.

26 2. The purpose of this hearing is not clearly or

1 properly stated so as to advise the mining industry of
2 the issue to be met and they are allowed no adequate time
3 to answer.

4 3. No facts or experience or proof are advanced
5 or available to warrant any change in rates.

6 4. I called at the office of the California
7 Inspection Rating Bureau in San Francisco, having
8 obtained a copy of the notice of this meeting through
9 our own efforts; it didn't reach me and I am an operator
10 employing about seventy men and paying an annual
11 compensation insurance rate of around \$9,000. I was
12 there informed at the California Inspection Rating
13 Bureau that the proposed surcharges to be added to the
14 present rates were to be, so far as affecting mining,
15 \$11.23 per \$100 of payroll for underground men, \$2.81
16 for surface men, and \$14.04 for ore milling, and that
17 these rates had been worked out by the said rating bureau.

18 We submit that it is obviously unfair to hold a
19 hearing affecting any industry and at the same time fail
20 to advise that industry of the subject matter of the
21 proposed hearing. So far as this hearing is concerned,
22 the mining industry not having been given that notice,
23 we submit it would violate the principles of a fair and
24 impartial hearing if any decisive findings were to be
25 made or entered against the mining industry of California
26 as a result of this hearing. It appears to be the duty,

1 therefore, of the Commissioner, and at the same time
2 I wish to extend my previous remark that we had the
3 courtesy of his statement that he is going to do this -
4 this is the statement of the industry as it found itself
5 before it come into this meeting - to withhold any
6 decision upon the propriety, need or advisability of any
7 change in compensation insurance rates affecting the
8 mining industry until a properly noticed and properly
9 advised hearing may be had, and with the support and
10 complete cooperation so that the Commissioner may be
11 aided so far as the industry is able in arriving at the
12 proper rates if any change either upward or downward is
13 to be made.

14 We suggest that this hearing be adjourned for at
15 least thirty days, that in the meantime the California
16 Inspection Rating Bureau and any and all insurance
17 companies, groups or organizations who are interested in
18 this proposed increase in compensation insurance rates
19 shall be required by the Insurance Commissioner to file
20 with him full and complete written data setting forth the
21 proposed rates, the reasons for such proposals of increase,
22 and definite evidence of loss or other adequate reasons
23 to support and justify such increase; in addition to that,
24 an allocation of the following charges as included in the
25 1934, 1935 and the proposed 1936 rates should be separate-
26 ly set up for each year:

- 1 (a) Home office charge.
2 (b) Acquisition of business.
3 (c) Payroll audit charge
4 (d) State and Federal taxes.

5 Also these respective amounts chargeable against rate
6 and percentage of rate included in each of the following
7 for 1934 and 1935:

- 8 (a) Overhead cost.
9 (b) Compensation paid to injured including
10 death benefits.
11 (c) Medical and hospitalization costs.

12 For each of the years 1934 and 1935 the following
13 information:

- 14 (a) On the number of mines reporting.
15 (b) On the number of men employed.
16 (c) The total payroll reported.
17 (d) The total premium paid.

18 When this data is assembled it should be open to the
19 inspection of the mining industry as individual operators,
20 and through organizations, associations or groups, and
21 then after due notice and a reasonable time has been
22 granted for preparation of answering data or information
23 on behalf of the industry, a further hearing should be
24 held.

25 We submit these suggestions, Mr. Commissioner, in
26 the spirit of justice and proper cooperation.

1 MR. FRED NOBE
2 representing
3 Empire Star Mines Co., Ltd.

4 MR. NOBE: I think from that dust count you will
5 have a better idea of what the actual conditions in
6 California underground mines are than those suggested by
7 Mr. Burbank obtained in Wisconsin foundries. The brief
8 I have filed contains experience in the operation of
9 Grass Valley mines over a period of twenty years, and it
10 also has a complete list of all possible and identified
11 cases involving silicosis or any lung disease.

12 MR. M. J. BROCK
13 representing
14 Governor Rolph's Committee on Mine Rates.

15 MR. BROCK: Mr. Commissioner, there are a couple of
16 remarks I would like to have the delegates think over
17 before this afternoon. Mr. Sears stated the fact
18 that those things should be put together and further
19 facts submitted. We all agree on that, but today, with
20 all of the gentlemen throwing the papers on your desk,
21 and looking around this room I find that there are lots
22 of papers to be put on your desk, if they are left there
23 for future consideration with nobody to take care of
24 them, we know they won't get much consideration. With
25 all due respect to you folks, there is a lot of work. I
26 think without a question of doubt that you in your judg-
ment will give more time; I think it would be a wonderful

1 thing if the mine owners, the miners, would appoint a
2 committee of five to have all those things submitted,
3 and they with the help of Mr. Searls or such able attorney
4 would work them out in the next few weeks together and
5 make a full and complete report on each and every paper
6 that is being submitted today and this report to be for
7 your consideration. Now, that cannot be done by
8 us as a body, that is impossible. We live all over the
9 State of California. If such a committee was appointed
10 or would work that could go with you to the Rating Bureau
11 and have the Rating Bureau submit the different facts
12 to them and work it out so that they at the end of the
13 time could bring you in a complete report so that you
14 will have everything at the ends of your fingers, I think
15 it would be a wonderful thing, and we will have something
16 to work on.

17 Another thing, to you miners, two or three years
18 ago I spent six months in the legislature in Sacramento.
19 The only thing I succeeded in doing was spending most
20 of our money. Now, the next legislature in January,
21 I hear we are to have a special meeting, you have no one
22 to represent you at the legislature. We cannot afford to
23 send a very magnificent crowd to represent you and some-
24 body should be there. The mine owners and miners should
25 take these things into consideration and see if we cannot
26 accomplish something, to have something for the future,

1 somebody to go to and refer your case.

2

3 MR. H. R. PLATE
4 Grass Valley

5 MR. PLATE: While that comparison between the
6 African mines and California mines is fresh in your
7 memory, while Mr. Burbank was talking - he is an
8 excellent talker - he made that comparison. It is very
9 unfortunate to do it because there is no comparison
10 whatever. The night before last I talked for a couple
11 of hours with George W. Starr who was manager for some
12 of the South African mines for a number of years and
13 also of the Empire Mine. He said to me very definitely,
14 "Of course, you cannot compare the South African mines
15 and their difficulties with silicosis or dust with the
16 California mine. . . there is no comparison, and if the
17 subject is brought up, which I hope it won't be because
18 there is no comparison, by all means say something
19 because you cannot compare the mines in any sense of
20 the word." I was afraid that possibly Mr. Burbank's
21 remarks would have a serious effect upon your decision
22 on this, but I can well assure you there is absolutely
23 no comparison whatever between the dust of the South
24 African Mines and our California mines.

25 MR. CARPENTER: Gentlemen, this has been a very
26 orderly and interesting meeting. I think we will call an

1 adjournment until two o'clock and we will run the
2 hearing as long as you wish after that or adjourn it
3 to a future date. I want to give everybody an oppor-
4 tunity to be heard that is here today. We will adjourn
5 until two o'clock.

6
7
8 FRIDAY, NOVEMBER 15, 1935,
9 TWO O'CLOCK. P. M.

10
11 (Meeting called to order by Mr. Carpenter)

12
13 MR. CARPENTER: At the morning session I understood
14 we had heard from all the representatives of the mining
15 classification who wish to be heard at this time. This
16 afternoon we are going to start off with representatives
17 of organized labor. Do you want to talk for them, Mr.
18 Scharrenburg?

19 MR. PAUL SCHARRENBURG
20 Secretary,
21 California State Federation of Labor.

22 MR. SCHARRENBURG: Mr. Commissioner and Gentlemen:
23 When we learned about the meeting called here today we
24 prepared a letter which is in your possession and which
25 I will briefly review.

26 The State Federation of Labor is an organization or

1 federation of all labor unions in the state including
2 miners and metal workers and so forth, and our principal
3 function is along legislative lines. As one of the
4 spokesman of the California State Federation of Labor
5 I desire to protest most energetically and emphatically
6 against the adoption of the schedule submitted by Mr.
7 Burbank and his associates.

8 We insist that the requested surcharge rate is not
9 the result of an ascertained and proven silicosis
10 experience but rather, as has been intimated here this
11 morning, has been gathered up haphazardly from Wisconsin
12 and South Africa. We submit there are more valuable
13 sources of information available than those submitted by
14 Mr. Burbank.

15 We call your attention to the fact that the State
16 Compensation Insurance Fund has been able to meet
17 profitably not only the current costs of silicosis cases
18 but also cases that have accumulated for twenty years
19 past. Notwithstanding this additional burden, the State
20 Compensation Insurance Fund, doing one-third of the
21 compensation insurance business of California, which
22 claims it operates on a cost of 15.64% of its premiums,
23 rebated to its policy holders an approximate 20% profit.
24 On February 20 of this year the State Compensation Insu-
25 rance Fund released this statement, and while it is a
26 little lengthy, I think it has a direct bearing on the

1 situation confronting you. (Whereupon Mr. Scharren-
2 burg read the following:)

3 "The Premium Income for 1934 totaled \$5,608,792,
4 an increase of \$1,384,981 or 33% over 1933. Approxi-
5 mately twenty-six thousand employers patronize the
6 Fund, or one-third of the insured payroll in the State.
7 While the new business written increased materially,
8 a substantial portion of this gain is due to the
9 improvement in business conditions throughout the State
10 during the past year.

11 "The amount returned to policy holders during 1934
12 as dividends totaled \$831,605. This is in excess of
13 20% of the premiums on the policies on which dividends
14 have been allowed and represents a direct saving to
15 employers. The expenses for 1934 were 15.94% of the
16 premiums, a substantial reduction over the last two
17 years; this will further increase the savings returned
18 to policy holders.

19 "The financial position of the Fund is now the
20 best in its history. The Fund has admitted assets
21 totaling \$9,452,550, which is an increase of
22 \$1,432,996, and is the largest ever held by the Fund.
23 The assets are represented principally by cash of
24 \$1,017,560, U. S. Treasury Notes of \$766,562, and
25 bonds of \$7,261,068. Only those bonds which are legal
26 for savings banks in California are purchased by the
Fund.

"The reserve set aside for future payments of
compensation benefits to injured employees was increased
during the year to \$5,870,241. It is not generally
known that under the California Law an employee who is
permanently and totally disabled receives a pension for
life. The Fund has two claimants who, as a result of
injuries in 1914, are still receiving compensation; one
who was injured in 1915, three in 1916, and six in 1917.
Unless otherwise ordered by the Industrial Accident
Commission, all claims are paid as wages during the
period of disability, or in the event of death, the
widow or other dependents receive benefits spread over a
period of 240 weeks.

"The reserve of \$5,870,241 is amply sufficient to
pay all deferred benefits to injured workers and their
dependents.

"The Fund is one of the largest taxpayers in the

1 State of California. It is taxed on the same basis as
2 a private insurance company. Over \$2,000,000 has been
3 paid in taxes to the State as the result of the
4 insurance business transacted by the Fund. The Fund is
5 not subsidized by the State in any way, paying rent for
6 its office quarters, telephone service, and for all
7 other items of expense usually furnished other State
8 Departments.

9 "The Fund's surplus increased \$24,400 during the
10 year to a total of \$1,965,346.

11 "This surplus and the adequate reserves invested
12 in high grade securities are evidence of the Fund's
13 financial ability to meet all its obligations to policy
14 holders and their employees, and to meet any contingency
15 which may arise."

16 We call your attention also to the fact that the
17 privately owned and conducted compensation insurance
18 carriers, who charge against each premium dollar paid to
19 them 40.6% for overhead and operating expenses, also were
20 able to meet their silicosis losses and still operate at
21 a profit. In fact, some of the private insurance com-
22 panies' business was so profitable that they rebated to
23 their policy holders from 15% to 20% of the premium
24 dollar.

25 We call your attention to the persistent report
26 that the insurance companies know that it will be
27 impossible for you to approve their proposed silicosis sur-
28 charge which proposes an increase of from 100% to almost
29 1000% upon California industries.

30 If the State Compensation Insurance Fund has met not
31 only the cost of present silicosis cases but also has
32 been able to meet the accumulation of twenty years' sili-

1 cosis cases which were recently charged to it, and is
2 able to show a 20% profit on the present manual rates of
3 the California Inspection Rating Bureau, how can the
4 proposed silicosis surcharge rates of the California
5 Inspection Rating Bureau of from 100% to 1000% be
6 explained or justified.

7 Labor of the State of California is unalterably
8 opposed to exorbitant rates that will ruin California
9 industries and throw thousands of men out of employment.

10 We cite for example the California Inspection Rating
11 Bureau's classification of "marble and stone cutting and
12 polishing," with a present manual rate of 2.55, and in
13 which industry the California Inspection Rating Bureau
14 requests your approval of a "silicosis surcharge of
15 25.26." This is a request for a surcharge increase
16 of 990.59%, or almost 1000% increase.

17 We insist that the California Inspection Rating
18 Bureau cannot produce proofs justifying this impossible
19 rate. The request of the California Inspection Rating
20 Bureau for your approval of silicosis surcharges is
21 replete with similar excessive rates.

22 We assume that because of the tremendous and far
23 reaching importance of your decision that the meeting of
24 today will be but a preliminary meeting, and we trust
25 very earnestly that we will be given an opportunity to
26 analyze carefully the data and material submitted by Mr.

1 Burbank and his associates so that we can come back at
2 a future date and assist you in digesting and analyzing
3 whatever they have, and in conclusion I would like to
4 say this, that there are some things in California,
5 notwithstanding the industrial wars we seem to have from
6 day to day, upon which we can cooperate, and one of
7 these is before us.

8 Instead of talking about rates, we should talk about
9 prevention of silicosis dust troubles. I am sorry to
10 have to say that labor has not had the whole-hearted
11 cooperation of industry in that prevention work. For
12 example, a few years ago labor in California attempted
13 to induce the California legislature to pass legislation
14 preventing cement dust from flying around in the holds
15 of ships. We didn't get away with it because industry
16 was united and there were doctors produced who told us
17 it was healthy for us to inhale cement dust, and that
18 is how it was. However, after two years they did adopt
19 a paper back cement bag.

20 At the last legislature there was a bill initiated
21 by Mr. Brennan of San Francisco providing for better
22 sanitation. The bill passed the Assembly in good form
23 and when it got to the Senate I was looking around for
24 some assistance and none of you gentlemen were there to
25 give us a boost, and before the Senate got through with
26 with the bill it was a little bit worse than when it

1 started in the Assembly.

2 I submit to you earnestly, not in the spirit of
3 sarcasm, that we can cooperate in these matters. We
4 can prevent the death of men who want to live. It has
5 been done elsewhere, it has been done to a certain
6 degree in California where you haven't gone far enough.

7 Another thing is to give credit to those employers, to
8 those corporations that go just a little bit further than
9 the law provides. I think it is very unfair to penalize
10 the employer who puts his money in a blower system and
11 pays the same rate as the employer who does not and who
12 says, "I don't give a damn, I am insured." It is the same
13 as if a man driving an automobile is careless about his
14 driving and says, "I don't give a damn, I am insured."

15 Upon that point, I trust, so far as it may be in
16 your power, that there may be a credit or rebating
17 system to those employers who do put some money into
18 prevention, adversely applying to those who do not.

19 I would like to call your attention to the fact
20 that the legislature has appointed a committee, rather
21 the lower house, the Assembly, with specific direction
22 to study that matter. Senator Malone was here this
23 morning, and that committee will furnish valuable data
24 on that subject matter.

25 That is all I want to say at this time. I think
26 the private carriers are gradually taking themselves out

1 of business. Many of them are high class fellows and
2 are friends of mine, but for some years past there has
3 been a campaign in California to make the State
4 Compensation Fund a monopoly, and if our private
5 insurance carriers keep up this line of attack I think
6 the time will come when they won't have any business left.

7 There are some gentlemen present who have some
8 information, particularly Mr. Brown of the Moulder's
9 Union. I think he can explain about the mill work and
10 metal shops.

11

12 MR. FRANK BROWN
Secretary
13 International Moulders' Union of North America

14

15 MR. BROWN: Mr. Commissioner and Gentlemen: My
16 name is Frank Brown and I represent the Moulders' Union
17 of North America. That is an organization of which
18 organized foundry employees are members. I am not going
19 to enter into, for the sake of time, any preliminaries
20 such as stating our interest and so forth. Naturally
21 we are very vitally interested in any factor connected
22 with employment or unemployment.

23 If these exorbitant rates, or even any kind of a
24 sizable increase goes into effect on compensation
25 insurance, it is going to tend to drive the foundry
26 business out of the State of California thereby reducing

1 the employment for our members, for the foundry workers
2 in the State of California.

3 I listened very attentively to the very able
4 presentation made this morning by Mr. Burbank. The
5 deduction I drew from the reasons why these surcharges
6 in compensation rates for foundries in California/was
7 because of a condition in the State of Wisconsin, in
8 other words, the study of silicosis in the State of
9 Wisconsin. I don't know why that would be considered
10 a factor in any way inasmuch as that has absolutely no
11 bearing whatsoever on the foundry industry or the
12 conditions pertaining to the foundry industry in the
13 State of California. There is an altogether different
14 condition prevailing in that state and I might state I
15 worked actively in the trade of moulding for over twenty-
16 two years in nearly every state that has foundries in
17 the United States and am fairly familiar with the condi-
18 tions in Wisconsin.

19 Now, in Wisconsin there is a different climatic
20 condition. As everybody knows, that is a very rigorous
21 climate. It is otherwise in the State of California,
22 For about six or seven months of the year in the State of
23 Wisconsin the foundries have to be closed; there is
24 practically no ventilation in them. It is otherwise in
25 California. The foundries here are ventilated for
26 practically twelve months in the year.

1 Another factor is that Milwaukee, which is the
2 principal and in fact it is quite a foundry center, is
3 the principal foundry center of the State of Wisconsin -
4 in the City of Milwaukee until recently - I don't know
5 if that condition is changed right now, - it has been the
6 custom to work sixty hours a week. That has been the
7 minimum hours worked in a majority of the foundries in
8 the City of Milwaukee. The maximum hours here in
9 California have been forty and forty-four hours, and
10 sixty hours was not the maximum in Milwaukee.

11 It is very self-evident the effect that is going to
12 have on workers' health. Naturally their resistance
13 is broken down and they are more susceptible to any kind
14 of disease.

15 That is not so in the State of California. Now,
16 the condition here is absolutely different than it is
17 in the State of Wisconsin. We are not concerned with
18 Wisconsin because the condition that we are dealing with
19 is here in California, and I say advisedly, and from an
20 experience dating over from about 1898, that in the
21 jobbing and machinery foundries of California I invite
22 the closest investigation and survey to be made, that
23 there isn't a silicosis existing in the jobbing and
24 machinery foundries in the State of California. It is
25 absolutely non-existent.

26 The organization which I represent is called an

1 organization of old men. It has always been considered
2 a particularly healthy trade. Men from our organization
3 have obtained prominence in boxing, baseball and other
4 sports that require a man to be in the finest of physical
5 condition, and it doesn't exist in the State of California
6 regardless of whether or not it does in the State of
7 Wisconsin.

8 Now, if studies are made in other states, I should
9 imagine that these studies would be made where the
10 conditions are more nearly similar, that is, where the
11 same number of hours are worked and the same type of
12 foundries exist. Now, there was a survey made, conducted
13 by the Industrial Department of the Brooklyn Chamber of
14 Commerce, and I just want to read an excerpt: (Reading)

15 "We have made a careful study of conditions in
16 the twelve foundries in Greater New York that are now
17 operating. The results of this investigation show that
18 silicosis is practically non-existent. At the present
19 time we have 546 productive employees in our foundries.
20 This is exclusive of clerical help. Forty-four employees
21 have been in the foundry industry from 1 to 5 years;
22 43 from 5 to 10 years; 63 from 10 to 15 years; 95 from
23 15 to 20 years; 79 from 20 to 25 years; 59 from 25 to
24 30 years; and 163 for 30 years or more. The average
25 ages for these groups are as follows:

21	1 to 5 years	- 29.7 years
22	5 to 10 "	- 33.5 "
23	10 to 15 "	- 38.7 "
24	15 to 20 "	- 42.1 "
25	20 to 25 "	- 43.4 "
26	25 to 30 "	- 48 "
	30 or more"	- 54.7 "

27 A glance at these figures will immediately disclose
28 that 29.8 per cent of our employees have been working in
the foundry industry for 30 years or more."

1 It states there very emphatically there isn't any
2 and hasn't been any silicosis, that silicosis is non-
3 existent.

4 Now, there have been a few cases, I believe five
5 is the exact number, developed in the foundries conducted
6 by the stove manufacturers in the Bay District here.
7 Now, I believe the members of our organization are fairly
8 intelligent. They realize that the most priceless
9 possession of a human being is health; there is nothing
10 any more priceless than that. When this matter of
11 silicosis came up, when cases developed in the stove
12 foundries, they immediately tried to find out the reason
13 for this in order that it be eliminated, not for the few
14 pieces of silver that we might collect as compensation
15 but as a safeguard to their health. They determined the
16 reason for silicosis in stove foundries or in any other
17 foundry was that they use a substance called parting or
18 partingmoll. It is shaken on but is used as a parting
19 as the name indicates. Now, one of the ingredients of
20 that was silica. Silica was an ingredient. There wasn't
21 any silicosis in stove foundries before they commenced
22 to use that. Naturally that was eliminated, and I might
23 say that as far as the foundry industry is concerned in
24 this particular district, we have had the closest co-
25 operation from the manufacturers and the foundrymen.
26 Now, the parting and partingmoll which included in its

1 making the substance of silica, that has been eliminated
2 and the parting and partingmoll used now is absolutely
3 free of silica.

4 Now in this, one of the communications that came to
5 my attention, it states silica grinding, that is the
6 classification of silica grinding, there is a surcharge
7 of \$28.07. Why? Because the name is silicosis. They
8 say that silica on the lungs is the reason for that.
9 That is the only substance used around foundries that
10 has silica in it and that has been eliminated. While
11 there have been a few cases developed in the foundries
12 conducted by the stove manufacturers, the cause has been
13 found, it has been eliminated, and I am absolutely
14 positive silicosis is stamped out in the stove foundries,
15 in the foundries conducted by the stove manufacturers
16 of the State of California.

17 Now, the reason given by Mr. Burbank this morning
18 for this raise in cost, or any raise in cost, is to meet
19 the cost of the particular hazard. Those were his exact
20 words. Now, if there is no hazard, if there is no
21 hazard, why should there be a single cent, why should
22 there be a single cent added to the cost of compensation.
23 I ask that. If I believed, representing the men
24 employed in the foundry industry, that there was a real
25 hazard, that they would have to have money there to meet
26 the cases that came up, why I would be absolutely in favor

1 of a reasonable rate being charged, but there is no
2 hazard and we believe, in fact, we are absolutely
3 opposed to any raise whatsoever, the slightest raise
4 even.

5 Now, to show what the members of the organization
6 which I represent think of this, they have had meetings
7 on it and they are absolutely willing to waive any claim
8 to compensation for silicosis. Why should they? It is
9 like giving away the sleeves on your vest, because they
10 feel there won't be any cases, there won't be any cases
11 coming up and there won't be any claims, so they are
12 willing to waive that.

13 In conclusion, Mr. Commissioner and gentlemen, you
14 can talk volumes on this, but I am going to conclude
15 very soon. I want to state this, and this is spread over
16 all the employees of a foundry, all the employees of the
17 stove manufacturer, to show you the ridiculousness of it -
18 quite a large percentage of employees of the foundry
19 work in the yard all day long; they are breathing the
20 good old ozone, and there is no healthier work in the
21 world than they are doing. Nevertheless they would put
22 this surcharge on those men who breathe nothing but good
23 air in the eight hours they work, men who are not even
24 in the building.

25 Our organization pays a death benefit and naturally
26 the member that passes away has to file a certificate

1 showing the cause of death. Going over the records for
2 the last twenty-five years, they have been particularly
3 free of any kind of chest complaint, that is, members
4 dying of pulmonary or chest complaint. I believe the
5 foundry industry is an industry that is just about as
6 free of that particular complaint as any industry, so why
7 there is any reason for this surcharge is something that
8 we do not understand, Mr. Commissioner, and we protest it
9 absolutely.

10

11 MR. JOHN A. O'CONNELL
12 Secretary,
13 The San Francisco Labor Council.

14

15 MR. O'CONNELL: Mr. Commissioner and Gentlemen:
16 Without reiterating what was said already, I want to say
17 amen to what Mr. Searls said this morning. In the main,
18 I want to take this opportunity of making a few obser-
19 vations on the statements made by my good friend Dan
20 Burbank. I want to say in passing that he learned what
21 he knows about the insurance racket from his employment
22 with the State Fund.

23 Having to do with industry generally here in San
24 Francisco, being secretary of the San Francisco Labor
25 Council embracing fifty or sixty thousand men and women,
26 I think I ought to know something about the activities
of the insurance carriers because part of our work, a good

1 part of it, is in defending our helpless fellows who
2 are unfortunate enough to get hurt in industry and it
3 isn't a fight generally with this Industrial Accident
4 Commission but with the private carrier. Men are being
5 ordered back to work - some can't walk and some can't
6 see - through the philanthropic efforts of these insurance
7 carriers in telling us how good they are to save our
8 people. They also suggested that we might practice a
9 little good housekeeping and put in some of the safety
10 appliances to prevent the things that are being complained
11 of, as a reason for the increase in these rates.

12 Why, gentlemen, let me say this to you. Every
13 two years we have been there at Sacramento; I have been
14 there for thirty years; and everything we have intro-
15 duced of that character, every piece of humane legislation
16 and even Governor Johnson, the most humane governor we have
17 had, has been criticised, if you please, for appropriating
18 money to establish the State Fund - every piece of humani-
19 tarian legislation we have today for the prevention of
20 accident, we have the insurance carriers opposing every
21 one of those deals. As Mr. Scharrenberg said, on one
22 occasion they brought doctors up there to tell us how
23 healthy cement was for us, how you should built up a fine
24 house of plaster, I suppose, around your ribs.

25 At this particular case in the last session, that is
26 why this hearing is being held today, they were disappointed

1 at not passing a piece of legislation to bring about a
2 statute of limitations on this silicosis and tuberculosis,
3 when he admitted himself this morning that it took in the
4 neighborhood of twenty years for this disease to develop.
5 Still they wanted to limit it to a period of seven years
6 and six months to make application should the thing ensue
7 and take place.

8 And I found out there is a real Santa Claus in our
9 midst. The insurance carriers are going to operate with-
10 out profit. In the words of Will Rogers, "There is
11 another funny one." I am not going to reiterate, but I
12 say we are opposed to this because it is going to make
13 all of you fellows sitting out there retrench and we know
14 where you always do it, by cutting wages, and we are
15 going to resist that to the last ditch. We are not going
16 to let you do it and will try to prevent the so-called
17 Moses in our midst who are going to try to add this
18 added expense to the cost of your doing business. We
19 will try to induce the good Commissioner not to see it
20 in their way and leave you alone. You have a tough enough
21 time now competing with labor all over the world in sell-
22 ing your wares and your goods throughout the State of
23 California and these United States, and we don't want to
24 bring about that condition of making Chinamen out of
25 the people of the State of California. God knows you
26 have enough to do trying to stay in business without

1 adding 12 and 14% and in some cases more than 900% to
2 your expense.

3 I wish you godspeed, the whole damned crowd of you.

4

5

6

7

MR. C. F. GROW
General Vice President,
International Association of Machinists.

26

MR. GROW: Mr. Commissioner, Gentlemen and Friends:
In dealing from a practical and constructive standpoint
of this proposed increase in the rates for insurance, I
have for a number of years been very deeply interested
in insurance for unfortunate workers who were the
victims of industrial loss and accident in the industries
not only of the State of California but throughout the
United States.

We of labor have done everything humanly possible to
develop legislation for the protection of these unfor-
tunate men and women who suffer because of certain conditions
such as obtain in the industry of the State of California.
For a number of years we have endeavored to do everything
humanly possible for the prevention of industrial ills,
accidents and sickness. We have made some progress but
not to the degree that we desire because we feel that
prevention is by far the greater correction than to
insure and pay compensation to the unfortunate victims

1 who become ill or have accidents befall them.

2 Now, in dealing with this particular problem of the
3 increase in the rates, it is going to bring an added
4 hardship to the industries of the State of California.
5 We feel that the increase is absolutely unjustified
6 and the motive is to increase the income of the
7 insurance companies in the state and disregard the
8 fundamental issues involved in this proposed increase,
9 a burden upon industry. A further burden upon industry
10 through the increase in insurance is absolutely unjusti-
11 fied.

12 We feel that any justification whatsoever in the
13 increase of insurance or any other rates or anything that
14 would further burden industry should be given up to the
15 people who are the investors and the managers of industry
16 and the workers who in a measure will have to meet the
17 burden of this proposed increase. Before a survey which
18 would be justifiable is made, and a complete one giving
19 to the employer, to labor and to the people of the State
20 of California an opportunity/^{to}scan very carefully the
21 business that has been developed, the cost of this
22 insurance and every other factor entering into it, I
23 believe we should not at any time consider anything of
24 this character whatsoever until the people have had an
25 opportunity of making a complete survey and bringing in
26 an intelligent report, and we of labor know that in the

1 last analysis, as presented by Brothers O'Connell and
2 Scharrenburg and others, as you know, as a result of the
3 increased burden financially and otherwise to the indus-
4 tries of the State of California, that labor in particular
5 is bound and usually pays the major portion of these
6 increases.

7 So, in conclusion, just this: I am amazed and
8 astounded that a proposal of this kind would be submitted
9 at this time in view of the statements made, public state-
10 ments in the press, stating the amount of business and the
11 profits made; as our old senator and governor of the
12 State of California said in addressing the Senate of the
13 United States when a certain measure was presented, that
14 he was also amazed and astounded and he couldn't find
15 words to express himself as covering this measure so
16 he had to go into the dictionary very deeply and
17 couldn't find the word there, but finally his memory
18 carried him back to Abe Lincoln who also at one time
19 had met an important problem and the word was coined by
20 him - he said, "This is an astonisher."

21
22 MR. CARPENTER: We will now continue with some of
23 the industries represented here today. I believe there
24 are representatives of various types of foundries here.

25

26

1 MR. CARROLL S. STILSON
2 representing
3 Metal Trades Manufacturers Association
4 and
5 Association of Southern California Gray Iron
6 Founders Society.

7 MR. STILSON: Mr. Commissioner and Gentlemen: I
8 would like to state that it is indeed a pleasure to have
9 the opportunity, at least in one thing as important as
10 this is, to agree with Mr. Scharrenburg with whom we
11 very often differ in industrial matters. He has hit the
12 nail on the head when he said here is a situation regard-
13 less of labor disputes that we can cooperate on.

14 There is absolutely no justice, in my opinion,
15 in comparing a foundry in Milwaukee with one in Califor-
16 nia. As stated by Mr. Brown, it is perfectly obvious
17 that conditions, climatically, particularly, are vastly
18 different in Southern California. We are making an
19 effort to eliminate the dust hazards; we are putting in
20 blowing machines, we are wetting the floors and letting
21 the fresh air in.

22 Just one other point and then I conclude. I think
23 the carriers are overlooking one very important item.
24 Frankly, the carriers don't care at the present time
25 particularly about carrying compensation insurance. The
26 real insurance that they want is that less hazardous
such as automobile insurance, fire insurance and liability
insurance, and very often they take compensation

1 insurance along with it because they have to, not because
2 they want to.

3 Gentlemen, let me say to you very seriously along
4 the lines these gentlemen have stated, that if these
5 rates as now promulgated were to go into effect, there
6 would be a lot less insurance in all lines in California
7 for the reason that many industries will be put out of
8 business and many, many men thrown out of employment.

9 Mr. Commissioner, finally, let me beg of you,
10 don't come to any conclusion at this time but give us
11 further opportunity to submit to you facts, reasons and
12 data why these rates as now promulgated should not be
13 put into force. Thanks.

14

15 MR. CARPENTER: We have three letters here from the
16 Gray Iron Foundry Association of Northern California
17 certifying Mr. Kerr, Mr. Henderson and Mr. Noah.

18

19 MR. ANDREW J. KERR
20 representing
21 Gray Iron Foundry Association of
22 Northern California

23 MR. KERR: Mr. Commissioner and Gentlemen: I have
24 been identified with the foundry industry since I was
25 knee high to a grasshopper. In fact, I have been in the
26 industry since I was nineteen and I am fifty-three years
old today. I have seen during that time many moulders

1 come and go and I am frank to say, as far as the
2 industry is concerned, it has been always looked upon as
3 one of the most healthful occupations in industry.

4 These five cases mentioned a while ago are cases
5 that developed in the last two or three years. Some I
6 think are doubtful, too, as well, although I am not
7 certain on that score, but the industry as a whole is an
8 industry that has been free from troubles of that kind.

9 Now, we are not unsympathetic to the poor unfortunate
10 who has met with a misfortune of this kind, but on the
11 other hand ~~xxx~~ you cannot expect to put on the industry
12 a burden such as proposed by our good friend here. In
13 our business it would mean an additional \$24,000 a year,
14 and that is no small sum for a moderately small concern,
15 and if these rates are put into effect, as Mr. O'Connell
16 and Mr. Scharrenburg have said, we would hang the crepe
17 on the door and go out of business before the sheriff
18 gets us, because it couldn't be passed onto the public.

19 These are conditions that face other lines of
20 industry as well and I believe when Mr. Frank Brown
21 came up and made his statement, and Mr. John O'Connell
22 and Mr. Scharrenburg, they were speaking in all sincerity
23 as to what conditions prevail in industry and what the
24 rates mean to us.

25 I believe every consideration should be given to
26 this over a period of time before you serve the industry

1 with a condition of affairs that would certainly mean
2 ruin to most of us if we attempt to keep in business.

3 Again, I want to caution you all not to jump into
4 this thing in a haphazard way.

5
6 MR. CARPENTER: We have a letter from the East
7 Bay Foundrymen's Association informing us that Mr.
8 Edward M. Welch and Mr. S. D. Russell are accredited
9 to represent the organization. Is either one of those
10 gentlemen present and desires to be heard?

11
12 MR. EDWARD M. WELCH
13 representing
14 East Bay Foundrymen's Association

15 MR. WELCH: Mr. Commissioner, it was my intention
16 to enlarge upon the remarks of Frank Brown in making
17 a comparison of conditions as exist in California and as
18 exist in Wisconsin or any other eastern states. There
19 really is no comparison.

20 Like many other industries, it is possible that
21 the foundry industry may have been lax until the last
22 five or six years, but as you go around and visit a great
23 many of the foundries you will find that steps have
24 been taken to remedy all dust conditions. I think that
25 is true, exceptionally true, in many of the foundries
26 both in northern and southern California. I can very

1 authoritatively state of my own company that we have
2 expended in excess of \$300,000 in the past four years in
3 consideration of the welfare and comfort of our
4 employees. While we don't know definitely the extent
5 of the foundry payroll, it is well in excess of six or
6 seven million dollars a year in the State of California.
7 We realize very appreciably that our competition is
8 keen, not only in foreign but as well ^{as} in our bordering
9 states. We feel that to have these surcharge rates go
10 into effect would be absolutely ruinous to the foundry
11 industry in the State of California.

12 The thought is being expressed by a great many of
13 the foundrymen if they can carry on under existing rates
14 and improve conditions for the welfare of their
15 employees they would be accomplishing a great deal,
16 more than could be otherwise done, and we particularly
17 beg of you not to consider this recommendation at this
18 time.

19
20 MR. CARPENTER: We have another letter stating that
21 Mr. Mainzer representing the Non Ferrous Foundry
22 Association, and Mr. George Kennard representing the
23 Pacific Coast Founders Association, will speak for those
24 Associations.

25

26

1 MR. F. A. MAINZER
2 representing
NON FERROUS FOUNDRY ASSOCIATION

3

4 MR. MAINZER: There is nothing I have to say that
5 has not been covered, particularly in view of future
6 dealings.

7

MR. GEORGE KENNARD
8 representing
PACIFIC COAST FOUNDERS ASSOCIATION

9

10 MR. KENNARD: I came here with a good many ideas
11 in my head to express, but as they have already been
12 expressed I have nothing further to add to what has
13 already been said.

14

15 MR. CARPENTER: Anyone else in the foundry industry
16 desiring to be heard at this time? If not, we will
17 pass on. There are a number of representatives of the
18 cement industry here today. I have a letter stating
19 that Mr. Herbert Clark of San Francisco, Mr. Geo. W.
20 Prince, Jr. of Los Angeles, and Mr. ^{J.}Harold Cragin of
21 Los Angeles, will represent that industry.

22

MR. GEO. W. PRINCE, JR.
23 representing
Cement Industry.

24

25 MR. PRINCE: I just want to say a word or two at
26 this time. Due to the fact that the notice was rather

1 short, we have not prepared the data which we will present
2 later on in connection with the problem of silicosis in
3 the cement industry.

4 Frankly, we are all of the opinion that there is
5 no silicosis risk in the cement industry and we are going
6 to gather data from which we will prove that to be the
7 case.

8 This whole problem which is before us at this time,
9 gentlemen, is a very serious one and one that has been
10 ably presented by our friends in the labor group and the
11 men representing other industries, which points to the
12 fact that we are taking a step which has serious con-
13 sequences unless it is correctly taken, and I know that
14 the Commissioner appreciates that from the attitude he
15 has taken in this whole problem in his kindly consenting
16 to a continuance of this meeting so that we may all have
17 a chance to go fully into the whole problem from various
18 industries which are affected or are to be affected,
19 and from that standpoint give him all the data with
20 which they may be squarely faced and what we may determine
21 and what increase if any may have to be made in connection
22 with any industries on this whole silicosis problem.

23 I sincerely hope that the Commissioner will give
24 due consideration to the request made by a number of
25 groups here today for a substantial continuance. I would
26 suggest at least a three months' continuance so that we

1 may gather for him and for the Bureau information from
2 which we can determine once and for all and settle this
3 whole problem. Thank you, Mr. Commissioner.

4

5 MR. CARPENTER: Anyone else representing the cement
6 industry that would like to be heard at this time? If
7 not, for the benefit of our reporter here and some of
8 you I think we will declare a recess for about ten minutes
9 and reconvene at three ten.

10

11 (Ten minutes recess)

12

13 MR. CARPENTER: The Clay Products Industries - there
14 are quite a number representing a great deal of the pay-
15 roll involved in this question of surcharge. I am going
16 to ask the representatives of the Clay Products Industries
17 to talk at this time. I understand Mr. J. J. Stein is
18 here and would like to be heard.

19

20 MR. J. J. STEIN
21 Executive Secretary
22 Clay Products Institute

23 MR. STEIN: Mr. Commissioner, my name is J. J. Stein,
24 Executive Secretary of the Clay Products Institute. I
25 represent eighteen clay products manufacturers in southern
26 California. We have adopted certain resolutions in
connection with these proposed surcharges but we under-

1 stand from the Commissioner that a further hearing will
2 be held in Los Angeles so that we feel satisfied that with
3 sufficient time being granted us we will be able to secure
4 same data to further our protest.

5 There are only one or two points I would like
6 to make at this time, one being in the event the hearing
7 is held in Los Angeles that at least ninety days be
8 granted our industry to prepare the necessary data. We
9 are vitally concerned with this measure and it will take
10 us at least that long to prepare our case. I would like
11 to suggest that when the hearing is held in Los Angeles
12 that the Commissioner arrange for each interested industry
13 to have the maximum amount of time for the hearing. We
14 received our notice just two days before we had to appear
15 up here, and we hope when the continued hearing is held
16 in Los Angeles the maximum time will be afforded each
17 industry. We would like to have ninety days.

18 Just one more point. A great many phases of this
19 problem have been discussed but I haven't heard anything
20 as to the probable effect on local industry if these
21 surcharges go into effect. Our industries are in compe-
22 tition with neighboring states where such charges are not
23 involved, and we feel it would be quite a handicap to
24 local manufacturers to have to take care of these sur-
25 charges where our competitors in neighboring states do
26 not have that problem.

1 There are other men from the Clay Products industry
2 who have other phases to discuss. That is all I have at
3 this time.

4 MR. B. F. CAKE
5 Vice President
6 Gladding McBean Company

7 MR. CAKE: I represent Gladding McBean Company who
8 operate six plants in southern and central California.
9 We want to join with other industries in southern
10 California in requesting a continuance of the hearing of
11 this matter to be held in Los Angeles at a date not earlier
12 than ninety days in which we may have time to prepare the
13 factual information that we will present at that time.

14 There are one or two things I would like to point
15 out in connection with the surcharge proposed, the sur-
16 charge rates as they apply to the clay industry.

17 First of all, it is a conceded fact by the medical
18 fraternity that silicosis, the angle of this matter in
19 which we are generally interested, is caused as a direct
20 result of direct inhalation of free silica dust. While
21 we wish to vigorously protest the surcharge rates in
22 general covering the clay industry, believing that they
23 are not equitable and just, based on the experience
24 rating, I would like to point out at this time certain
25 phases of the matter, namely, that in the manufacture
26 of clay products such as terra cotta brick and products

1 of that type it is a very well known and established
2 fact that free silica content of the ingredients which
3 make up these products contain from 10 to a maximum of
4 25% free silica. These, however, have been placed in
5 the same classification, so far as surtax charges are
6 concerned, with silica brick manufacture, the ingredient
7 of which is at least 97% free silica. Likewise, the
8 surcharge rates are similar to those of pottery and
9 earthen ware and table ware industry which contains a
10 large percentage of free silica.

11 So we therefore, Mr. Commissioner, respectfully
12 request that during this period of postponement that
13 there be a restudy made of the surcharge rates as they
14 apply to the clay industry in order that they may be put
15 on a more equitable and just basis. Thank you.

16

17 MR. CARPENTER: Anyone else here wishing to be
18 heard representing clay products? We have letters here
19 from the Ione Fire Brick Company stating Mr. Walter
20 S. Rountree will represent them as attorney.

21

MR. WALTER S. ROUNTREE
representing
IONE FIRE BRICK COMPANY

22

23

24 MR. ROUNTREE: Mr. Commissioner and Gentlemen: I
25 appear here representing three fire brick companies in
26 northern California. I wish to say that the only request

1 that we are going to make at this time is that a reason-
2 able opportunity be given to the companies I represent
3 to accumulate such data as they think will be helpful
4 to the Commission in determining what rates should apply
5 to the fire brick manufacturers in the particular area
6 where they are engaged in their business.

7 I think it is recognized in the industry itself,
8 the manufacture of brick and clay products, that special
9 consideration should be given to the question as to whether
10 or not the content of silica is particularly injurious in
11 the particular product they are working in. I think as
12 the injuries are considered they should be broken down and
13 each particular area should be considered from its own
14 merits. We expect to produce data which will be of
15 assistance to the Commission.

16 I think all of the gentlemen here in the room feel
17 in the same frame of mind. They want the opportunity to
18 develop their own case, not with the idea of being
19 antagonistic but with the idea of a fair rate to apply
20 to their own industry. We think there should be at
21 least a continuance of ninety days to enable the people
22 we represent to produce such data as they find
23 available.

24

25 MR. CARPENTER: We have a letter here from the
26 Stockton Fire Brick Company stating Mr. John T. Roberts

1 would represent them.

2 MR. ROBERTS: Nothing to say, Mr. Commissioner.

3 MR. CARPINTER: Anyone else representing any of the
4 clay products industries who would like to be heard at
5 this time? The Rock, Sand and Gravel Producers
6 Association nominated Mr. R. L. Hall of San Francisco
7 to represent them. Does Mr. Hall wish to be heard at this
8 time?

9
10 MR. E. J. GOODPASTOR
(Speaking for Mr. Hall)
Executive Secretary,
11 Rock, Sand and Gravel Producers Associa-
12 tion of Northern California.

13 MR. GOODPASTOR: I am executive secretary of the
14 Rock, Sand and Gravel Producers Association of northern
15 California. The members of such association do quarry
16 rock and stone crushing and are engaged in the business
17 of stone crushing and sand and gravel digging. Mr. Hall,
18 our representative, was here this morning but being an
19 attorney and because of a previous engagement in which he
20 had to go to court, he could not be here this afternoon.

21 With your permission we would like to submit to
22 you in writing our objections to the application of these
23 surcharges to our industry at some later date.

24 I might say, following the remarks made by the man
25 from the Moulders Association that fully 90% of the
26 employees in the industries I represent work entirely in

1 the open. A great deal of the processing is wet processing.

2 With your permission, Mr. Commissioner, Mr. Hall will
3 submit in writing our objections. I thank you.

4

5 MR. CARPENTER: Anyone else representing the sand
6 and gravel interests? Anyone here on the stone interests?
7 We have a letter from McGilvray Raymond Corporation.
8 Anyone from the stone or marble polishing business? We
9 will pass that. The glass ware, various glass classifi-
10 cations - is anyone representing those industries here
11 today?

12 MR. HAAS: Mr. Feigenbaum was here this morning and
13 announced he would submit his contentions in writing.

14 MR. CARPENTER: Anyone representing the automobile
15 classifications involved?

16

17 MR. B. F. CAKE: Mr. Commissioner, I was asked to
18 present credentials and a resolution from the Commercial
19 Body Manufacturers Association, copies of which were filed
20 with the Deputy Commissioner in Los Angeles yesterday,
21 merely asking for a ninety day extension.

22 MR. CARPENTER: Now, there are a number of classifi-
23 cations with small payrolls involved. Are there any
24 representatives of other classifications involved here who
25 might wish to be heard? We have the wheel manufacturers,
26 machinery products and talc mills and other classifications

1 involving relatively smaller payrolls than those already
2 heard from - abrasive paper - asbestosis. We have
3 heard a lot about silicosis today but nobody has had
4 anything to say about asbestosis. Anybody representing
5 those industries here who cares to be heard? Any other
6 groups or bodies represented here?

7
8 MR. A. P. LANGE
9 representing
Retail Drygoods Association of
San Francisco.

10

11 MR. LANGE: Mr. Commissioner, I represent the
12 Retail Drygoods Association of San Francisco. With your
13 permission I would like to say a few words.

14 MR. CARPENTER: In what way would they be interested?

15 MR. LANGE: They are vitally interested in anything
16 that affects the welfare of California. Our sole
17 interest lies with California; anything that affects
18 California industry adversely affects us. It is from that
19 standpoint that I would like to read you a letter written
20 by Mr. Russell D. Carpenter, Chairman of the Insurance
21 Committee of the Retail Drygoods Association, to
22 Honorable Samuel L. Carpenter, Jr., Insurance
23 Commissioner: (reading)

24 "In according with notice appearing in the Daily
25 Commercial News of November 8, 1935, we advise you that
26 we have appointed Mr. A. P. Lange to represent us at
the hearing to be held by you Friday, November 15, 1935,
for the purpose of considering 'a long schedule of

1 proposed changes in compensation insurance rates.'

2 "As the notice does not specify the nature of the
3 proposed changes - what classes are to be affected and
4 which rates are to be advanced and which are to be
5 reduced -- it is obviously impossible for us or our
6 representative to make preparation to participate as
7 intelligently at the hearing as seems to us desirable
8 for the protection of our interests. We therefore
9 request that the business of the hearing on November
10 15th be confined to presentation of the proposed
11 changes and the reasons therefor, and adjournment taken
12 to a date which will enable those interested to study
13 the matter and prepare their comments or arguments for
14 or against your approval of such changes.

15 "Anticipating that the changes to be considered are
16 due to changes in the California experience of insurance
17 carriers, we ask that we be furnished at as early a date
18 as possible the following data limited to Workmen's
19 Compensation insurance carriers operating in California
20 and elsewhere, for each of the five calendar years
21 1930 to 1934, both inclusive, as set forth in the
22 reports on file in your office.

	National (excl. California)	California only
23		
24	Premiums	
25	Losses	
26	Loss Ratio	

27 "We also ask that those proposing changes in
28 existing specific rates furnish similar data regarding
29 each rate to be changed.

30 "If it is within the scope of the hearing we ask
31 that consideration be given to the following matters:

32 "Requiring insurance carriers to secure the
33 signature of the insured to the endorsement agreement,
34 California Approved Form No. F-4, limiting and res-
35 tricting the insurance to exclude certain relatives of
36 the insured.

37 "Permitting Workmen's Compensation insurance
38 carriers to issue 'stop loss' policies to self-insurers
39 without present \$100,000 limit of liability.

40 "Trusting that we may hear from you with reference

1 to the above, we are

2 "Very truly yours,

3 "RETAIL DRY GOODS ASSOCIATION
4 OF SAN FRANCISCO

5 R. D. CARPENTER
6 Chairman, Insurance
Committee."

7 It is our belief, based on statistics furnished
8 us by the Insurance Commissioner, that California is
9 paying and for a long time has paid far more for
10 workmen's compensation than is charged in other states.
11 Our yardstick for measuring rates is the loss ratio.
12 Some years ago the Department furnished me with a
13 statement showing the loss ratios in California and
14 thirty-five other states. Why they were limited to
15 thirty-five, I don't remember now. I presume only
16 35 states at that time had workmen's compensation laws.

17 The document I have in my pocket shows that
18 California was overcharged \$8,600,000 in compensation
19 measured by that yardstick. Subsequently I made up
20 figures for later years. That overcharge, according to
21 my figures, runs in the neighborhood of \$3,500,000 per
22 year.

23 It makes no difference to the Retail Drygoods
24 Association or the members how much somebody else has
25 to pay for insurance except as it affects the amount
26 of money unnecessarily sent out of this state. There-

1 fore, we ask the Insurance Commissioner if he will
2 kindly have statements made up showing the loss ratio
3 in California and the loss ratio in other states in which
4 these self-same companies operate, with the idea of fin-
5 ding out whether or not there is discrimination against
6 California.

7 We find in the Insurance Code this provision, that
8 the Insurance Commissioner is charged with the duty or
9 the power of passing on rates promulgated by the Rating
10 Bureau or workmen's compensation. We find this
11 provision made, that the statistical and actuarial data
12 compiled by the Industrial Accident Commission and State
13 Compensation Insurance Fund shall at all times be
14 available to the Commissioner for his use in judging the
15 adequacy or inadequacy of rates or schedules filed.

16 We hope the Commissioner will insist upon having
17 the data filed with him and that it will be open to the
18 committee, the policy holders, the premium payers and
19 employees of premium payers, to examine them and deter-
20 mine whether any advance is in order or whether
21 deductions are in order and in what classes.

22

23 MR. CARPENTER: I believe Assemblyman Mayo has
24 requested the opportunity of saying something.

25

26

1 MR. JESSE M. MAYO
2 Assemblyman,
3 Assembly Committee on Mines and Mining.

4 MR. MAYO: Mr. Commissioner and Gentlemen: I am
5 sorry I was not here this morning. I only heard about this
6 meeting last night and due to conflicting engagements I
7 was busy this morning so I apologize for not being here
8 and appearing at the time the mining industry had their
9 say this morning because primarily that is what I am here
10 for, representing the mining industries inasmuch as the
11 ten counties I represent in the legislature are made up
12 of mining counties.

13 What little of the proceedings I have heard so far
14 has been rather interesting. I heard my good friend
15 John O'Connell himself say "the insurance racket", and
16 some of us in the mining industry are ready to agree with
17 him. Whether it is a racket or not, with some of the
18 rates which are included in it, if it is not, it is border-
19 ing on it.

20 Some years ago there was a rate of \$11.85 for a
21 hundred dollar payroll for all classes of mine employees
22 and that meant a stenographer in the mining office. The
23 mining company had to pay \$11.85 per hundred dollar payroll
24 and probably across the street in maybe an orchard or
25 something like that the rate would be 30¢, and that was
26 the condition existing prior to 1933.

1 When I put that classification bill through the
2 Assembly and it became a law, the Insurance Commissioner
3 forced the insurance carriers to classify the mine risks
4 according to hazards, and another thing that we in the
5 mining industry, particularly the laymen, cannot under-
6 stand is why heretofore - I haven't the new figures but
7 when I did go into this matter thoroughly two years ago
8 we found that out of the premiums paid by the mining
9 industry 40.6% went for administrative overhead and 17%
10 went for acquisition cost. That same rate of 40.6% for
11 administrative overhead was carried and possibly is today
12 for the \$20 rate and also for the 5¢ rate.

13 Now, in all business, we have been taught in the
14 business world that the higher the volume the less our
15 overhead in percentage or business cost, but it isn't
16 so with the insurance industry. They have charged that
17 same rate of administrative overhead at every stage of
18 the game.

19 We respectfully ask the Commissioner to look into
20 that one field when he comes to approve or disapprove
21 these rates, that he look into that one phase of the
22 insurance rates, why it is necessary to continue to
23 charge 40.6% from a \$1.00 or ^{rate} \$2.00 on up because certainly
24 the cost of writing a policy of 30¢ per \$100 payroll
25 which might apply in my office on purely clerical work,
26 would be the same as it is in the mining industry, yet

1 that 40.6% that might be reasonable and proper for
2 a \$1.00 rate has been carried on up to the \$20.00 rate.
3 That is a ridiculous thing that we hope the Commissioner
4 will look into.

5 As to the volume of business, I think it is safe to
6 say the mining industry today is 100% greater than it was
7 two years ago. Certainly the principle "the greater the
8 volume the less the overhead" has not applied in this
9 case. It is probably true - I haven't the statistics
10 but I think I am safe in saying the mine payrolls and the
11 insurance business written for mines have probably more
12 than doubled in the last two years. Yet we find the same
13 old administrative overhead and the same method of calcu-
14 lation occurring right on up in an industry that is
15 increasing. We hope the Commissioner will look into
16 that phase of it.

17 Another thing, after that Supreme Court decision
18 and after the defeat of certain bills in the legislature
19 here, we come back and face this! Why all the fuss
20 when they can charge such exorbitant administrative over-
21 head. According to statistics, out of the premium
22 dollar the injured workman gets less than 30% of the
23 premium dollar paid. Primarily insurance is for labor
24 and secondarily for industry, to protect them from suits.
25 If labor gets less than 30% of the premium dollar paid,
26 what is wrong with that set-up? The mining industry

1 has never gone to Sacramento to my knowledge and advocated
2 purely the State going into business, but if this situa-
3 tion continues, I am not saying this as a threat but as
4 a warning, in the State of California the mining industry
5 and other industries will be forced to go to Sacramento
6 and work for a monopoly with 5% overhead as other states
7 have done. Not only is the mining industry faced with
8 these surcharges, paying double the charges, but they must
9 be penalized to carry on!

10 MR. CARPENTER: I have a letter here from the
11 Paraffine Company saying that Dr. H. Wahle will attend
12 this meeting and might wish to be heard; a letter from
13 the Industrial Accident Commission stating Mr. C. B. Day
14 would be here. Is Mr. Day here? I think now it might
15 be well, before we adjourn this meeting, to call again
16 on Mr. Burbank who started the meeting this morning and
17 who might wish to talk upon the subject further at this
18 time.

19
20 MR. BURBANK: Mr. Commissioner, the only answer I
21 would have to any remarks at this time would be for the
22 satisfaction of any of those present because I will sub-
23 mit to you a summary of rebuttal in detail when the
24 record is written up. However, if you will pardon me with
25 one or two remarks I want to remind you gentlemen of some-
26 thing that apparently every speaker in opposition to

1 these rates has overlooked, at least he hasn't mentioned
2 it, and that is this:

3 When I outlined the proposal this morning I told you
4 that unless you had silicosis losses you would pay out
5 nothing for silicosis surcharge insurance, you would get
6 it back, and if your history proved that you were improper-
7 ly in this rating classification you would eventually be
8 removed entirely from this list of classifications.

9 Now, it has been very, very cheery this afternoon
10 to hear there were so many industries that had no silicosis.
11 We understand from Mr. Searls that there is no silicosis
12 in the mines; we understand from the moulders that that is
13 a very healthy industry, an old men's organization; we
14 understand from the cement people that dust of cement
15 doesn't cause silicosis.

16 Now, gentlemen, under the proposition that we
17 suggested to you, we told you that this was on an absolute-
18 ly non-profit basis, that if the money that you paid was
19 not paid out in losses you received it back, and if you
20 refuse to consider it on that basis, if you don't wish
21 to put up the money to protect the workmen who may have
22 silicosis, and I am not going to argue about whether they
23 have or not, we know what the increase in claims in the
24 last few years has been in a progressive ratio, we know
25 that silicosis claims are being made against all the
26 industries more or less, we have a list of them and if

1 time permitted I could give them to you - if you don't
2 want to follow it on that basis of putting up the money
3 on a pure cost basis, then of course you have the alter-
4 native of acting on your own judgment. If you believe
5 that your judgment is sound, that there is no silicosis in
6 your particular industry, then do not expect us to act on
7 that judgment when the records and our information tell
8 us different, but ask for an insurance policy with
9 silicosis hazard excluded from it. That is perfectly
10 fair; we approve it one way or the other. You put up
11 the money and if we don't use it we pay it back. If you
12 don't want to do that and you are so cock-sure you have
13 no silicosis, exclude that from your policy and let
14 labor take the risk. The Lord knows that you are our
15 customers and we don't want to hurt you a bit. We think
16 we are fairly intelligent and the last thing in the world
17 any intelligent man does in business is to hurt his good
18 customers.

19 Every last man here has proclaimed, whether speaking
20 for labor or industry, that these rates were going to put
21 him out of business. I say to you there are one or two
22 alternatives. Either you have no silicosis and you won't
23 have to pay, you receive back any premiums you pay up and
24 therefore you won't be put out of business; or there is
25 a call for benefits to injured men and under the law
26 you have to take care of those injured men. Now, if

1 the law of workmen's compensation requires you to pay
2 benefits that are going to put you out of business,
3 that is not my fault. That is a matter entirely foreign
4 to this; we have no control of it. We do not want to
5 see anybody lose his job or put out of business. We
6 simply say to you that insurance companies must be
7 solvent, they cannot gamble, but we are willing to do
8 this on an absolutely cost basis, and let me say to you
9 gentlemen, something was said here about the very splen-
10 did condition of the State Compensation Insurance Fund.
11 I concur in that completely; it has enormous assets
12 and splendid reserves. So have most of the other
13 carriers. The California Inspection Rating Bureau I
14 represent is supported by every one of the carriers in
15 California including the State Fund, but the assets
16 there, the surplus there, doesn't belong to you to use
17 for silicosis. It belongs to you for the risks that
18 you have been charged those premiums for. It belongs
19 to the farmers in the valley who have paid for their
20 protection. It will be paid back to you by partici-
21 pating companies if they earn the money. This must
22 be considered intelligently and on its own.

23 Something has been said in the way of criticism
24 of the 40.6% which is included in all workmen's compen-
25 sation rates in addition to the pure premium. The pure
26 premium means that part of the premium which is devoted

1 to loss and loss expense. Uniformly, as a result of
2 experience over the entire period of time that compensa-
3 tion has been in effect in the United States, that
4 relative cost for overhead has been established. The
5 breakdown of that cost is as follows:

6	Taxes	3.1
	Inspection	2.5
7	Administration and audit	9.5
	Claims expense	8.
8	Acquisition	17.5

9 Now, gentlemen, the Insurance Commissioner is com-
10 pelled to make rates under the wording of the minimum
11 rating law as adequate for all carriers including insu-
12 rance carriers which deal with agents and brokers, and
13 the established custom over the United States is to pay
14 the acquisition cost carried here.

15 As far as the other items go, they are not subject to
16 modification, and notwithstanding the suggestion made
17 that they should be decreased as the volume increases,
18 it is found that the amount of administration and audit,
19 the amount of inspection work and taxes increase directly
20 as the amount of the premium increases.

21 No man in my opinion has a right in California to
22 complain against this loading or against the acquisition
23 expense there which would be the only point of complaint.
24 If he doesn't care to deal with the company which deals
25 with agents and brokers, he has a number of companies
26 including the State Fund with whom he can do business on

1 a participating basis and presumably return him dividends
2 which are earned because they don't pay out those items.
3 There is no complaint on that, and yet because California
4 for twenty years has been an openly competitive state in
5 that respect, for many reasons it has been thought wise
6 to permit it if you wanted it, and all of you, I venture
7 to say, are insured with companies paying the 17.5, and
8 it doesn't lie in my mouth or in the mind of the
9 Commissioner to make a rate that is not adequate for
10 the methods of business for all the companies. The
11 acquisition is there; it is not a matter of ground for
12 complaint.

13 If any method can be devised for protecting injured
14 workman and industry against the liability to the
15 injured and death from silicosis and have industry pay
16 that cost, better than we have devised here, we are
17 delighted to have it offered, but we don't assume with
18 anyone that there is no silicosis hazard. That is
19 silly. We know there is a silicosis hazard. We
20 know there are men in this state, notwithstanding they
21 will yell their heads off about these rates and claim
22 they have no silicosis exposure, that insist on
23 insurance because they are not willing to take the risk
24 themselves, but we can't do it without the money to pay
25 for it, and all the money we ask for to pay for it is
26 what it costs. If anything could be fairer than that,

1 we don't know what it is.

2 MR. MAYO: Isn't it a fact that the 17.5% acqui-
3 tion is in addition to the 40.6?

4 MR. BURBANK: No, it never was.

5 MR. MAYO: If it is 40.6 for the \$1.00 rate and
6 for the \$9.00 rate the same cost is added --

7 MR. BURBANK: That is because the various items
8 of cost are found to vary directly as to the amount of
9 business handled.

10 MR. MAYO: How has that been found?

11 MR. BURBANK: If you desire to go into that, if
12 you will go down to the Bureau we will show anybody
13 how that is arrived at. That is the method in stock
14 companies, how business is done, and the rates must be
15 sufficient for all carriers. As I said before, you
16 don't have to do business on that basis if you don't
17 want to.

18 MR. SEARLS: I would like to inquire on one ques-
19 tion in the silicosis matter. You say they are not
20 going to insure us for silicosis on the present rate.
21 If a man were to file a claim against us now on the
22 present rate we would not be covered?

23 MR. BURBANK: Yes, you are. That is why we want
24 the change made as quickly as possible.

25 MR. BROCK: I would like to know whether the actual
26 losses paid out by the carriers in California since

1 January 1, 1933, have amounted to in excess of \$11.00
2 due to silicosis in underground mines or \$14.00 in mill
3 men.

4 MR. BURBANK: I am glad you brought that up and I
5 also overlooked this South African angle. The answer
6 to your question is no, we didn't depend in the making
7 of these rates upon the cost of the silicosis claims
8 that have developed since January 1, 1933, those before
9 then being inconsequential. Those costs are not fully
10 developed at this time. We depend so far as we use that
11 experience upon the showing - for instance, this year
12 there have been to date in excess of 63 claims made for
13 silicosis; last year 40 odd, and those claims do not
14 take into consideration the cases which are filed before
15 the Industrial Accident Commission of which there are
16 74 filed since December 1st of last year. Does that
17 answer your question? In other words, we are taking the
18 trend for rate making purposes because there isn't suffi-
19 cient time to establish cost basis from experience. We
20 have to take the trend and the trend is up.

21 FROM THE FLOOR: If that be true and a company were
22 required to deposit, say, \$50,000 as silicosis coverage
23 at the beginning of the year, when would you be justified
24 in rebating the \$50,000 to that company if it had no
25 silicosis claims that year or paid no silicosis losses?

26 MR. BURBANK: The plan we propose is this: Assume

1 it cost \$50,000 for your particular company and your
2 policy was taken out in the year 1935. 1935 issued
3 policies will all expire at the end of 1936. In other
4 words, the December policy would have to expire. It is
5 our plan then/in January or February of 1937 we will
6 know exactly what claims have been filed against your
7 industry, and we hope to have the Commissioner supervise
8 the setting up of the cost of those claims. Let's
9 assume, in order to be optimistic, that some given
10 industry had no claim whatsoever. Under this plan every
11 nickel paid in would be paid back some day shortly
12 after January, 1937.

13 FROM THE FLOOR: If this particular company put
14 up \$50,000 it would then get it back?

15 MR. BURBANK: If there were no losses in the
16 industry. If there were losses in the industry, the
17 entire amount would be put up for the losses.

18 FROM THE FLOOR: Would we have to wait until fifteen
19 years elapsed to get back the \$50,000, or would you
20 have to have the \$50,000 held in escrow until the
21 unlimited statute of limitations decided it?

22 MR. BURBANK: This plan contemplates that every year
23 money will be put up and every year the money of previous
24 years will be returned or the claims in each year will
25 be taken care of.

26 FROM THE FLOOR: If a mine closed down and the

1 company went out of business, the money would stay
2 there indefinitely?

3 MR. BURBANK: The \$50,000 could always be returned
4 to the successor in interest.

5 FROM THE FLOOR: But if the mine closed down?

6 MR. BURBANK: What would you do in any corporation
7 if you dissolved it and subsequently found you had an
8 asset? I guess you would arrange to get the money back.
9 The point I am making is that the money would be there
10 for you.

11 FROM THE FLOOR: Of the proposed \$50,000 - we have
12 just used that figure - would this 40% overhead be
13 deducted from that before it would be returned?

14 MR. BURBANK: The only overhead which would be
15 charged against you, that is, the only expense load,
16 meaning the 40.6%, that would be charged against you
17 is that portion of the premium which was used by the
18 industry. In other words, if you had no losses you
19 would get back all your premium. I am in error on
20 the last statement I made - we cannot give you back the
21 taxes, but that is the intent, to give back all that is
22 possible. How are we going to give the 17-1/2% back
23 paid for acquisition? The answer is this. When you
24 insure right now through an agent or broker and he
25 receives his commission, if at the end of the year it
26 turns out there must be a return premium to you because

1 your payroll hasn't covered your deposit, the commission
2 must be returned pro rata by the agent, and that would
3 be up to the company to see that the agent returned it.
4 The company would be responsible.

5 FROM THE FLOOR: Supposing these rates as you
6 recommend go into effect and they become the permanent
7 rates of the Commission, then when those rates are
8 paid in to the insurance companies, State or otherwise,
9 these particular raises that you get, are they to be
10 kept in a special fund?

11 MR. BURBANK: Yes, sir.

12 FROM THE FLOOR: Entirely different from the
13 regular fund?

14 MR. BURBANK: A special reserve.

15 FROM THE FLOOR: And the same with the State and all
16 the balance?

17 MR. BURBANK: Yes, we are charged as a liability
18 in our statement and it is the plan suggested that the
19 money you pay is set up as a liability to be either
20 paid out to injured men in your industry or returned to
21 you, and further, to amend your suggestion as to it
22 being a permanent rate, none of these rates are perma-
23 nent. If you have no silicosis, there is no reason
24 the rates cannot be dropped.

25 FROM THE FLOOR: One question I would like to ask.
26 This morning you said it was fifteen to seventeen years

1 before the disability became noticeable and the claim
2 could be made.

3 MR. BURBANK: You misunderstood me. This is what
4 I intended to say. The average American experience
5 as to when silicosis becomes disabling is found to be
6 fifteen years. It does become disabling in two or three
7 years in rare cases. New York has taken seven years
8 as an average, and there are figures to show it is
9 absolutely correct, and the Massachusetts reports I
10 have have batches of statistics where many men go
11 thirty years and some never develop silicosis although
12 they are exposed to it.

13 FROM THE FLOOR: You said silicosis is rarely
14 disabling until fifteen to seventeen years after expo-
15 sure. This afternoon you said this money the assured
16 put up would be returned if no silicosis developed.

17 MR. BURBANK: I said he would get it back at the
18 end of the policy year.

19 FROM THE FLOOR: If that is true, we are presuming
20 all the industries of California are flush with money
21 and care nothing about the interest rate on it, where
22 would that interest earning go on the money until the
23 time it was paid up?

24 MR. BURBANK: I don't know if that is considered
25 a profit for us in the Commissioner's mind. If he wants
26 to do that, to give it back to the employer, so be it.

2 I told you we are putting this to you on a non-profit
3 basis.

4 FROM THE FLOOR: Do the silicosis surcharge rates as
5 proposed include the 40.6% overhead?

6 MR. BURBANK: They do.

7 FROM THE FLOOR: Then I understand that is at no
8 profit to yourself?

9 MR. BURBANK: I think I fully explained that.

10 FROM THE FLOOR: You are spending the full 17.5 on
11 acquisition?

12 MR. BURBANK: Some companies spend 17.

13 FROM THE FLOOR: You have a mandatory provision, it
14 is mandatory to take this insurance and yet you have
15 17.5% overload in that.

16 MR. BURBANK: You understand that two-thirds of the
17 business in the State of California are in insurance
18 companies which return a participating profit to you
19 which in most cases is in excess of the 17-1/2%.

20 FROM THE FLOOR: Getting at the actual basis on
21 which the surcharges are proposed, take underground
22 mining - what experience rating have you in California
23 the
24 mines showing 11.43 is/correct rate?

25 MR. BURBANK: We haven't any.

26 FROM THE FLOOR: Don't you think it is rather/then
27 presumptuous
28 to come in and propose that rate?

29 MR. BURBANK: No. I explained this morning that

1 the rating was made by taking the ratio between the
2 hazard and the information available which was the foundry
3 information, and if these tentative sums you put up don't
4 work out in experience, those relative ratios may be
5 modified. That is something that will always be before
6 the Commissioner.

7 FROM THE FLOOR: This morning you said a good deal
8 about these reports of Massachusetts, Pennsylvania and
9 Wisconsin but you said nothing about the experience
10 rates in California.

11 MR. BURBANK: There are no actual experience rates
12 in California; they haven't been acquired on silicosis.
13 Until 1933 there were no significant losses on silicosis
14 to establish any silicosis experience. Since 1933 and
15 1934 the amount of experience there is utterly insuffi-
16 cient. You can't base a ratio on that.

17 FROM THE FLOOR: One more question. What do you
18 think the effect would be if certain numbers of the
19 legal fraternity whom some people have called 'shysters'
20 should see a huge fund in the insurance companies'
21 treasuries taken for the purpose of providing for
22 silicosis hazards? Don't you think the very fact that
23 you have introduced rates so high would tend to induce
24 tremendous claims?

25 MR. BURBANK: No, I don't. There are eighteen to
26 twenty million dollars available right now for that

1 purpose. I don't think if you had another million it
2 would make any difference.

3 FROM THE FLOOR: Were any employers or policy
4 holders brought into consultation before you fixed your
5 rates, or was it merely a company proposition?

6 MR. BURBANK: It was fixed by the study of the
7 organization or the Bureau. We spend from \$100,000 to
8 \$150,000 a year to maintain experience. It is a fast-
9 finding organization on everything pertaining to
10 compensation. These rates were made up by that group
11 of men.

12 FROM THE FLOOR: Have you any statistics as to the
13 amount of money paid out since that Supreme Court
14 decision on direct losses for silicosis?

15 MR. BURBANK: I don't know if we have or not but
16 do
17 if we/have it would not be useful.

18 FROM THE FLOOR: Have there been any claims?

19 MR. BURBANK: Yes, and that may be ascertained, but
20 that would not be useful for the reason that a great
21 majority, 51 of the cases filed with the Industrial
22 Accident Commission, came out of the Argonaut strike.
23 Those were old cases. They went to the sanitarium and
24 dug up men who were laid up with tuberculosis for a
25 long time. They dug up widows, and many of the cases
26 were of very doubtful nature, very old, a very serious
question of the statute of limitations on some of them.

1 FROM THE FLOOR: I think it is admissible that the
2 Argonaut cases are debatable, but certainly you should
3 find out how much was actually paid out.

4 MR. BURBANK: We could find out but it would not
5 be useful.

6 MR. MAYO: What I pay my wholesale house is
7 useful in determining my overhead cost.

8 MR. BURBANK: Take oneman - I don't know if he is
9 in the room - an insurance man told me he had six cases of
10 silicosis. He was surprised to find six. Five of the
11 six are life pensions. The cost very likely will
12 run to very large figures. I can tell you this - I know
13 of one case where a certain insurer has a \$32,000
14 reserve not because, gentlemen, silicosis eventually
15 kills but it induces - I can't help what the doctor
16 said this morning - silicosis predisposes to tuberculosis
17 of a type that lingers and kills. According to medical
18 experience it is incurable. That means you have a \$5,000
19 death benefit to meet, but in the meantime you must
20 count on a average medical cost of confinement and support
21 which is far beyond any accident cost.

22 FROM THE FLOOR: How is the proof of this going to
23 be made? Take the case of a man only working in
24 California two years with a group of fifty men recruited
25 from all over California, Utah, Nevada and everywhere else.

26 MR. BURBANK: Under the law of California the

1 employer is only liable for the proportion of the time
2 the man worked for him, his pro rata of the time of
3 exposure. If you can prove that the man worked for
4 you one year and that he worked twenty years in Nevada,
5 you would be liable for one-twentyfirst.

6 FROM THE FLOOR: As I understand, this hearing
7 comes up on the application of the Bureau for the
8 establishment of change of rates. I suppose in the
9 application the proposed plan is outlined in detail,
10 including the rates. I think we have all copies of
11 the proposed rates. Will there be available to the
12 members who have come to this meeting a copy of the
13 plan itself?

14 MR. CARPENTER: I want to say we have been debating
15 the question as to how many copies would be needed and
16 the expense, and also copies of the transcript of today.
17 There will be available at least in the Insurance
18 Commissioner's office in Los Angeles, San Francisco
19 and Sacramento copies of the transcript of the hearing
20 here today with the information furnished, which
21 included the introduction in general of the plan by
22 the Bureau. There is so much data on this - the
23 Commissioner's file is already about this high and if
24 we begin to print or publish all of the data compiled
25 in connection with it I think there is no question the
26 expense would run far beyond the Insurance Commissioner's

1 budget to operate his office. I think if any person
2 here desires a copy of the transcript today or a copy
3 of some of the other matters pertaining to it, that
4 probably too could be arranged so that you could pur-
5 chase those copies.

6 MR. BURBANK: With respect to any of the lists of
7 rates or the plan, the suggested plan of handling the
8 deposit of the fund or reserve of it or any portion of
9 the supporting data to the application, if you will
10 give us a couple of days' notice the Bureau will be very
11 glad to furnish that.

12 FROM THE FLOOR: Mr. Commissioner, may I ask one
13 question? This morning you made reference to the
14 condition that existed in the mines in South Africa
15 and they were referred to in several instances.

16 MR. BURBANK: I forgot to mention that. The only
17 reason I mentioned the silicosis experience in South
18 Africa, the only reason I mentioned the three to five
19 million dollars damage due to silicosis in the eastern
20 part of the United States, was merely in passing to
21 indicate the seriousness of the problem. I do not say
22 and did not intend to say and it is not a fact that the
23 experience in South Africa or with respect to damage
24 suits in the United States was used in any way in the
25 making up of any of these rates. It is a fact that in
26 South Africa since 1902 they have had this problem

1 and in England they have worked out this problem in a
2 more refined way than any other place except Ontario
3 which has been working on it for a number of years.
4 I merely gave them as examples of the situation. They
5 are not used as a basis for our computation.

6 MR. PLATE: If you didn't use South Africa
7 as a basis or you didn't use these foundries in the
8 east, what in God's name did you use?

9 MR. BURBANK: We did use the foundries. We didn't
10 have the figures in South Africa. All we had was the
11 official report on South Africa which was general data
12 on cost over a long period of time.

13 MR. PLATE: You haven't the slightest idea of
14 the conditions in South Africa.

15 MR. BURBANK: We have now. You told us about it.

16 MR. PLATE: The South African mines are notorious
17 for their dust; they have sandstone walls and in deep
18 mines are poorly ventilated and they are working negroes,
19 and you try to pit that condition against these mines.
20 We mining men in California pride ourselves on the work
21 we do for safety and good conditions. We pride ourselves
22 on it and you come along and take South Africa, take
23 anything, Timbuctoo, Alaska or any place and try to wish
24 \$11.00 on us and cut our throats.

25 MR. BURBANK: My dear sir, let me say this to you,
26 that if the mines in California have non-existent silicosis

1 hazard, you get back every nickel you put up. If you
2 are willing to stand on your judgment, just exclude
3 silicosis from your insurance policy.

4 MR. PLATE: That is the most beautiful dream
5 I have ever heard. I came out here in 1917 and opened
6 a mine. Each year the rates have gone up and each year
7 it was said it wouldn't be any more. When I was on
8 Governor Rolph's committee of fifteen investigating
9 this compensation business we were a bunch of babies and
10 were licked before we started. We got information and
11 data from the United States Bureau of Mines and all that
12 data showed that California accidents were on the
13 decrease every year but the rate was going up every
14 year and there was no rhyme or reason to it. 40.6 was
15 handed to us, we couldn't help that, but the rates next
16 year would have to be a little higher because expenses
17 were more and your Bureau showed it should be, while the
18 United States Bureau of Mines showed that our fatalities
19 and accidents were going down all the time, but we were
20 paying more. Right now you come along with the silicosis
21 scare and raise the underground rates 100% and then tell
22 us we will get our money back. That is fine news! We
23 will lose the interest on our money and we don't know
24 that we will get our money back. God knows we have
25 never got anything back in the last fifteen years.

26 MR. BURBANK: All I have to say, if you don't get

1 any money back you are in a different position than
2 most of the employers in the state.

3 MR. PLATE: I have heard a lot from them, too,
4 as to what they were supposed to get and didn't. Is
5 the Commissioner we have now a Californian?

6 MR. CARPENTER: I certainly am.

7 MR. PLATE: I am, too. I was born here and love
8 my state. We have been trying for years in the
9 mining business to see if we could ever get some of the
10 money going into Canada and Mexico; we have the mines
11 here. We are now getting the money on the strength of
12 \$35.00 gold and you fellows - and the variance tax is
13 another - are doing everything in your power to drive
14 the money out of the state and shut down the mines, and
15 believe me a lot of them will be shut down. You don't
16 realize the number of marginal mines where it only takes
17 some little thing to tip it over into the red. I want
18 to tell you you are going to close down the mines which
19 are opening up and putting hundreds of men to work.

20 MR. BURBANK: I know this, whether they are marginal
21 mines or big mines, if there are injured men you have
22 to pay the loss and you can't pay a \$1.10 loss out of a
23 \$1.00 rate.

24 MR. CARPENTER: Gentlemen, I want to thank you for
25 your consideration today and your attention and courtesy
26 at this meeting. I want to say that this meeting will be

1 adjourned to a future date to be given out later. We
2 will notify all those that were here and everybody else
3 we can think of who will be interested. We will have an
4 adjourned meeting in Los Angeles and then possibly at a
5 later date an adjourned meeting here.

6 Regardless of the time set for that meeting, I would
7 request that those industries which desire to file infor-
8 mation with me begin their work at once. I will communi-
9 cate with the representatives of the various industries
10 and try to fix as early date as possible. I am one of
11 those people who believe when you have a job to do, it is
12 a good thing to do it and get it out of the way, and the
13 extent of this proposition hanging over the state is
14 detrimental, I think it is something that should be
15 decided within a reasonable time, but I want to extend
16 that reasonable time to you and ask your cooperation to
17 make that reasonable time as short as possible.

18 I thank you very much, gentlemen.

SAN FRANCISCO, CALIF.

R. A. WHITTAKER
J. O. PROBERG
MANAGERS

RECEIVE
May 10, 1937
MAY 11 4 14 PM
DIVISION OF INSUR.

MEMORANDUM TO MR. A. H. MOWBRAY

RE: EX-SILICOSIS ENDORSEMENT.

This will confirm our conversation with reference to the question of endorsements in use tending to waive the liability for pneumoconiosis.

Following the Commissioner's final decision of May 1st, 1936, and in accordance with instructions contained in the last paragraph of that decision, we prepared, after conferring with the Bureau attorney, a sample endorsement form which was indicated as California Approved Form #9. This specimen endorsement in printers proof form was forwarded to the Commissioner at that time and we feel sure you now have it in your possession. For the purpose of this memorandum, the only two features of the endorsement which are of importance are (1) the side note; and (2) the wording in the body of the endorsement. These are as follows:

"INDUSTRIAL

DUST

DISEASES

(Pneumocon-
iosis includ-
ing silicosis
and asbestosis)
NOT

INSURED

Any liability for any workmen's compensation benefits or any other liability of the employer to any employee or dependent, or any cost, expense, or service to the employer, arising from or incidental to industrial dust diseases (pneumoconiosis including silicosis and asbestosis) or any aggregation thereof or thereby."

Ever since the Commissioner's decision was rendered, the Bureau has refused to approve any policies submitted to us involving any of the surcharge classifications to which were attached any endorsement forms tending to waive the liability for pneumoconiosis. All such policies have been stamped "Passed subject to Investigation" and we have maintained a record of such policies.

We have repeatedly advised inquiring members that the use of the newly recommended form (Form #9) or the previously approved forms (#5 and #6) with wording inserted to waive this liability would have no force or effect and we felt would immediately be rejected by the Industrial Accident Commission in the event of a claim on the grounds that it had not been previously submitted to them for their examination as required by the law.

MEMORANDUM - 5/10/37
EX SILICOSIS ENDORSEMENT.

-2-

We append to this memorandum a copy of our record indicating the policies now outstanding bearing such limiting and restricting endorsements. At the head of each sheet we indicate the skeleton of the endorsement used by the particular company as to sidenote and body of the endorsement. It is understood that all other features of the endorsement are in order. You will notice many different forms but the great majority of companies have seized upon the new language contained in the recommended form #9.

It is our intention to await the approval of the Insurance Commissioner of this form or some substitute for it and upon receipt of such approval, notify each member company who has any of the forms outstanding which do not agree with the finally approved form to correct and resubmit for Bureau approval or to entirely eliminate the endorsement from their policy and add the surcharge.

We also have a duplicate record which we intend to use as a check against the companies' reports of the registered mail return receipts notifying the Industrial Accident Commission of all such outstanding policies.

As to your comment regarding Rule 5 of the Insurance Commissioner's ruling of October 11th, 1929, in our opinion the automatic thirty day approval provided in this section will not apply in the case of these silicosis endorsements. In the first place, the policy with such an endorsement attached has never been officially approved by the Bureau and in the second place, to take advantage of a technicality, it has not complied with the second provision contained in the Order, i.e., "and provided that such endorsement shall be immediately submitted in triplicate to the California Inspection Rating Bureau for transmittal to the Insurance Commissioner." In the third place, we take the language of the Commissioner's order of May 1st, 1936, "Upon approval of the endorsement form all carriers may issue policies excluding the hazards of pneumoconiosis" as superseding any other provision contained in the general Order dealing with limiting and restricting endorsements issued October 11th, 1929, and an attempt to so endorse any policies prior to the receipt of some officially approved form is entirely valueless and leaves the companies with no legal standing. This is in accordance with our repeated advices to the carriers.

Yours very truly,

Manager

NOTICE OF HEARING

A PUBLIC HEARING WILL BE HELD at my office, 417 Montgomery Street, San Francisco, California, at 10 a. m. on June 11, 1937, to determine the effect upon the adequacy or inadequacy of workmen's compensation insurance rates of proposed changes now on file in said office, in the classification of risks, premium rates and system of merit rating, relating to certain occupational disease hazards.

SAMUEL L. CARPENTER, JR.,
Insurance Commissioner of the State of
California. jn4-1t

BUREAU CIRCULAR #355
PNEUMONOCOONIOSIS SURCHARGE RATES.

TO MEMBERS:

You were advised under date of June 1st by Bureau Circular #353 of the intention to revise surcharge rates for new and renewal business effective June 1st, 1937. We have today received the following notice from the Insurance Commissioner:

"TO WHOM IT MAY CONCERN:

By virtue of authority conferred and duty imposed upon me by the provisions of Article 2, Chapter 2, Part 3, Division 2 of the Insurance Code, and after due hearing, I hereby approve as adequate for all workmen's compensation insurers admitted in the State of California, the changes in the system of classifications, rules, rates and rating plan, pertaining to the hazard of pneumoconiosis, all as contained in that portion of the Manual of Rules, Classifications and Rates, to which this order of approval is prefixed.

Said classification of risks, premium rates, system of rating and rules governing their application as so changed are hereby approved to become effective for all new and renewal policies of workmen's compensation insurance to which they are applicable, effective on and after 12:01 a.m., June 1, 1937, and shall then, as to all new and renewal policies, supersede all classifications of risks, premium rates, systems of rating and rules relating to the hazard of pneumoconiosis, in force immediately prior to 12:01 a.m., June 1, 1937.

Nothing herein contained shall be construed as in any way modifying or changing the rules and regulations with respect to reserves required to be maintained by insurers or with respect to reports to be made, as set forth in my Final Decision dated May 1, 1936, pertaining to the hazard of pneumoconiosis.

SAMUEL L. CARPENTER, JR. (Signed)
Insurance Commissioner. "

In order to expedite the release of any June policies which may have been held up we append hereto a revised list of the surcharge classifications and rates.

Numerous changes have also been made in the rating plan which should receive your careful attention. You will shortly receive a reprinted section of the Pneumoconiosis Rules, Rates and Rating Plan for the basic manual which will embody all of the changes which have been adopted and approved by the Insurance Commissioner.
