Mr. Colmont			

Dick Davis has asked me to comment on the subject question raised in your Call Report dated November 21, 1966.

I believe that all we can tell Mr. Colmont is that a few drops of Pydraul contaminating a few lumps of sugar would not create any toxicity problem. It is probable, however, that an undesirable taste would result which would classify the sugar as "adulterated". I don't know whether anyone has tried any Pydraul in their coffee or food tea but there might be an off-flavor which would not have a particularly desirable effect on "customer or consumer relations".

This company is studying the possibility of using fire resist in all its hydraulic operations. There does not seem to be a fire hazard in this sort of operation although we were not obtain details of the hydraulic uses. Apparently there is secrecy in sugar refinery and also the alcohol dist. are linked to these sugar plants. There must have been which the EPCs want to talk about.

Mr. Colmont was particularly concerned about the ignition of pools of hydraulic fluid lying around.

We supplied all the details concerning leak, resistant materials and B.P. are to submit a report to Mr. Colmont.

It was difficult to assess the potential but this may be 15,000 litres for a first fill.

Mr. Colmont wishes to know if it is possible that a small amount of Pydraul could drop off on a lump of sugar. Apparently this sometimes happens with mineral oil and they do not seem to bother to discard the contaminated sugar. They wish to know if they can act in the same way with Pydraul.

Action : D. Smith or R. Davis - please comment.

Would you please drop a brief note to V. J. HEROUFOSSE - BRUSSELS - cc R. DAVIS/D. F. Smith R. A. STEENROD
