RE: Monitoring of L.A.D. Fuel Truck Driver for Benzene Exposure

CO: Bruce Heinze
Industrial Hygiene

On July 25, 1988, the Louisiana Division fuel truck driver was monitored for benzene exposure using 3M 3500 badges. The results are as follows:

CONTRACT DRIVER	TIME	(TWA) PPM BENZENE
Joe Daigle	480 min.	.0003

AREA

Attached to truck	480 min.	.001
-------------------	----------	------

The TWA (Time Weighted Average) exposure limit for benzene is 1 ppm.

The driver wore no respiratory protection during this time but did stand upwind during times of loading and off-loading.

This one sampling indicates that there was no benzene exposure problem during this eight hour period.
