DIVISIONAL ACTION PROGRAMS

1. Redesign air chamber bracket/intermodal requirement

The new air chamber bracket was redesigned to meet the following criteria:

- Interchangeable with bracket currently used on Eaton round trailer axles.

- Positioned on round trailer axles to offer competitive spring brake chamber - ground clearance.

- Optimized hole pattern for best air chamber life and for ease of chamber installation.

- Include optional hole pattern for use with 5.5 inch slack adjusters as needed to ensure proper brake balance (e.g. low profile radial tires).

- Adaptable to industry standard push rod length of 6.5 inch.

- Designed to meet TTMA Recommended Practice number 62-82, issued December 10, 1982.
