My dear Doctor:

Through correspondence with Dr. Gehrman of Du Pont, Wilmington, Delaware I am taking the liberty to write you concerning your experience with blood examinations in lead intoxication.

For several years I have had charge of the preventive work in a storage battery concern using in principle the method described recently by Dr. McCord of ~~W. Detroit~~ City. I am particularly interested in what your experiences are as to the efficiency of this or other blood examinations as a protective procedure to men constantly exposed to lead. We feel that to a certain extent such tests are of considerable aid although occasionally we are suddenly disillusioned with no reasonable explanation.

Furthermore, I am especially interested in what your views are concerning the advisability of quantitative urine examinations and to what extent you are using them or advising them as a preventive measure.

I am enclosing a self-addressed envelope for a reply. Thanking you for your courtesy.

Sincerely yours,

A. W. Hammond
A. W. Hammond, M.D.
