068-VALVE PACKING

SAFE GUARD EVERY RING AND VALVE JOB

- Valve Packing is set in at the top of the guide - this keeps oil in - so you get the full benefit of the oil.
- Valve Packing (with its light tension spring) hugs close to the guide, giving just enough pressure to allow for perfect valve action - never too tight, never too loose.
- Valve Packing's solid graphite base lubricates without oil (but absorbs oil) making a valve specially selective and self-lubricating.
- Valve Packing is easy to install. No special equipment needed - one simple operation - for a better job, although not necessary, counter sink top of guide and presto! - it slips right on the stem.
- Valve Packing has a heavy guage steel helmet protecting valve packing from oil and wear. Its construction allows for perfect alignment with spring and graphite base.

No car or truck on the road can do without Valve Packing - regardless of age - even new cars need it. For extra sure motor operation, and guaranteed safety for guides, it is essential to give your car or truck the proper protection.

APPLICATION OF VALVE PACKING FOR PASSENGER CARS

Car & Years	Models	Part No.
BUICK		
61-65	Special	3-4926
35-65	All 8 Cyl. (Ex. Spec.)	3-4924
