

Chesterion 444 is full metallic on rod or shaft. It runs frictionless without usual gland pressure. Why? It's due to E-L-A-S-T-I-C back and built-in oil seal in each Metallic ring. These special metal rings are soft enough to machine themselves to rod imperfections. 8 to 10 years uninterrupted service is common with Chesterion 444.

Cheslerton 444, formerly
A. J. Mason, is the most
famous name in refrigera-
tion back in Ohio to install
and make it out but may
be opened to follow and or
manufact. Full directions in com-
pany every year. The called
for Ammonia, CO
steam, brine, air, ammonia
liquids and gases.

PACKING PROBLEMS by J. W. Hartley

Gaskets That Won't Bond to Flange

When you want to make a tight joint that will still open cleanly, use Chesterton Russo #210 Sheet Packing. Complete graphite impregnation of long asbestos fibers does the job. Cuts smoothly . . . Jack Hartley is one of the real old-timers of the packing business. Write him your problems.

PLANT OPERATION and MAINTENANCE OCTOBER 1953 SECTION

LONG LIFE assured for this hot stack because heat-resistant paint is applied to hot surface

Cover That Surface but...

... make sure that surface is clean • you have the right primer • mill scale is ruled off new metal • your color scheme is right • you do the job safely • running machinery is protected • in particular, see that you get what you pay for
