DOCUMENT DESCRIPTION: Letter to The Saranac Lab from J.P. Woodard RE
Memorandum on Asbestosis

July 22, 1948

Dr. A. J. Woodard, Director of Research
The Carver Laboratory
Saratoga Lake, New York

Memorandum on Asbestosis

Dear Art:

Recently I returned from a two-and-a-half week trip to learn that the agitation on the subject of industrial diseases in Canada continues.

We are extremely anxious to get some information from Carver, as we have discussed from time to time over the last several months.

Your letter of June 14 did not mention when you hope to have this available and I am wondering if you can let me know at this time what is your estimate of the completion date.

It is not our thought to delay, nor would we wish you to delay, giving information on the various dusting experiments that have been performed, pending the study of men from Canada. This latter job might take a long time and we are in need of some data now.

I hope you can give me an approximate completion date not too far ahead, but should like to have your estimate at this time whatever the date may be.

Yours sincerely,

J. P. Woodard
