INTER-COMPANY AND INTER-DEPARTMENTAL CORRESPONDENCE

TO: T. Jago

FROM: R. N. Porter - Engineering

DATE: August 18, 1972

SUBJECT: Low Asbestos Project

It is my understanding that an engineer will not be required on a continuous basis for the initial phase of this project. Based on the list that you provided on August 11, if sufficient effort is required then it would be imperative that I obtain an additional engineer since our current work load has already been stretched.

Obviously it is a question of priorities and I would appreciate sufficient advanced information if we are to get into a major program. I will need your help to justify such an addition to my department for the purposes that you outline in your letter.

At the present time I will assign whoever is available to work with R. R. Dzurilla and will utilize maintenance people whenever possible for keeping machinery running or making machinery adjustments.

per approved. I do not need a full time engineer but we do need an experienced assistant to help RRD with any problems that arise. These men should be on the premises during test runs even if they are in the middle of the night.

As to priorities - what can I say. I do not like this problem there may be some delay in our business.
