PROOF TELLS THE TRUTH Make these simple tests yourself

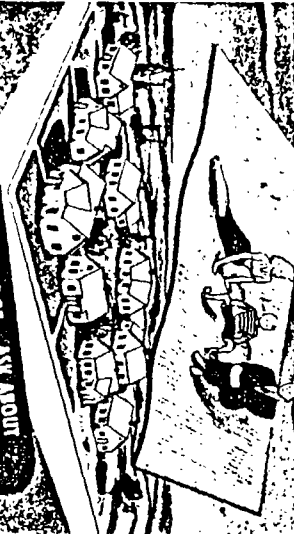

NOTE THESE GLATEX SUPERIORITIES

Made of selected asbestos fibres and portland cement, Glatex Siding will not burn. Each shingle is 27" long instead of the usual 24", which means fewer joints and tighter walls. All edges die-cut for neatness and snug joints. Reinforced from top to bottom with long asbestos fibres running parallel with the grain—for strength where needed most. Twenty-four different textures relieve monotony of "repeat patterns."

500—GLATEX WAVY BUTT WHITE

COLOR AND TEXTURE COMPLETE THE PICTURE

An interesting wood grain texture is deeply indented into the shingle. Selection of whitest white or tones of cascade green or silver brown applied lightly over the china-white background, producing silvery variation of

tone. The clapboard design is particularly suitable to colonial houses. There are 24 different wood grain patterns which afford a variety of textures without noticeable repeats. Here are combined color, texture and charm that are made to last.
