Date April 9, 1957

To Dr. Emmett Kelly Reference
Main Office

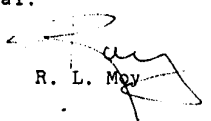

At St. Louis Subject PURE OIL COMPANY

TOXICITY DATA ON PYDRAUL A.C., AROCLORS
and SANTOPOID 22-RI.

Dr. P. S. Nisson of Pure Oil Company, 35 East Wacker
Drive would like a toxilogical report on the three
products listed above.

The reason they are a little concerned about these
three products relates back to the old X disease in
cattle and chlorinated naphthalene. They are familiar
with the chemistry of our Aroclors and strongly sus-
pect that Aroclors are used in both Santo-
poid 22-RI and Pydraul A.C. It is the nature of our business
neither to deny or confirm such assumptions.

They are a good prospect for Pydraul A.C. and Santo-
poid 22-RI and would like to have this toxicity data
before proceeding further on their evaluation of these
two products for purchase approval.
