Dear Carol,

SIR RICHARD DOLL STUDY

I have received a letter from Sir Richard Doll with reference to the cost of the proposed project. I am enclosing a copy of this letter and, as you will see, he feels the cost will range from £10,000 to £15,000, plus expenses.

I have therefore written to Sir Richard, accepting his figure.

Yours sincerely,

B BENNETT

Dear Dr. Bennett,

I enclose a copy of the revised draft of our angiosarcoma paper. We have made a few further changes subsequent to yours and, of course, added some comments on Nicholson et al.'s estimates (a copy of whose paper I also enclose). Will you seek John Stafford's approval? As it normally takes a long time for Editors to decide whether to publish a paper and then to get it to galley stage we need not wait long for his reply. We can always send in later any alterations that Stafford wants us to make.

David Forman has asked me what the sources of information were for the data in Tables III and IV. I take it they were the same as for the data on the cases.

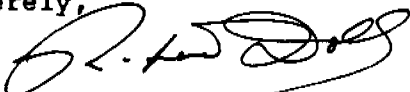

Should we add any acknowledgments?

It would be nice if you could update us with information received during 1984 about any new cases with onset before 31.12.83, which could be added as a footnote to the last sentence.

Could you let us have a ngm^{-3} equivalent for ppm of VC?

It is difficult to specify a precise sum for the other matters you asked me about, as it is impossible to tell how much work may be involved. I would, however, have thought that something in the range of £10,000 to £15,000 (plus expenses) would be appropriate depending on the work involved. The expenses would be small unless I had to travel to the States.

Yours sincerely,

Richard Doll
