Steve, I had understood that Dr. Eagle talked with Bill Hunt concerning the questions in your 12/9 Call Report and gave him every bit of information we had. We have no more information available to give to Eagle and he knows this. Would you please pass this back to Dave Thomas.

Incidentally, what happened to the anticipated volume of 1 million to 1½ million lbs. of Aroclor 5460? You talk about 200,000 lbs. in your Call Report but then Augie's memo comes along and in trying to help sell us on the idea of continuing to invest in Swift he has the volume back up to a million lbs. What is the realistic long term volume for 1964?

Attention: A. R. Hempel. Concerning the "investment" in Swift, we only offered to assist in sample preparation and evaluation of tagged Aroclor 5460. This was to the extent of just $5000 not $10,000, as you mentioned in your memo.

Furthermore, it was and we assume still is clearly understood by Ed Eagle that this was to assist in the above specific program and not be considered any indication of price reduction, special arrangement, etc. Since Swift did not need our back-up on the radio active sample we should not be made to contribute to any other work concerning Aroclor 5460.
