

Northwestern Study Strategy

Purpose: We must establish to new a relationship for dealing with Northwestern on the use of the Krummrich worker study since the current contract has expired and the researchers are interested in publishing further. This new relationship must assure the health of workers, be based on good science, and keep us and our workers informed about future uses of the data. We should establish this new relationship as soon as possible given recent undertaking of the Northwestern researchers in use of our data and our worker's health data without our knowledge or approval.

1. Jaffe and I meet with Hryhorczuk and Dolan to review Fertility Level of Pentachlorophenol Workers

- Share our reviews with them and get their feedback.
- Determine how firmly they believe conclusions of original report and see if they are willing to do reanalysis of data and rewrite.
- Ask them to work with us to craft worker communication.
- Find out their plans for publication.

Jaffe and I meet with Wallace and Hryhorczuk to:

- Discuss pass handling of study data using the recent dissertation of an example of what has gone wrong.
- Make our needs known including worker communication, good science, and lead time planning.
- What are the health concerns, if any, of Northwestern group on the health of the Krummrich workers.
- Express need for new contractual relationship. Use draft letter of Snively as basis for agreement.
- Reconstitute Peer review committee whose purpose will be:
 - Review and prioritize research agenda
 - Review all study protocols and study reports
 - Assist in worker communication

Set up Peer Review Committee

- At least 3 members (one Union appointed, one University, and one Monsanto)
 - Meets as needed
1. We will ask Northwestern to fund, but we should be prepared to fund.
