R. L. Goller, Research Dept.
P. E. Grindrod, Research Dept.
R. H. Griesbach, General Product Control
H. C. Lippincott, General Product Control
H. L. Radloff, Research Dept.
R. C. Schomisch, Purchasing Dept.

For Monsanto:
D. H. Bechtold
P. R. Graham
G. L. Wallace

Objective: To present phthalate ester status

Summary:

The phthalate ester presentation appeared to be well received. The three point message of the talk was:

DSW 588317

- A straight forward explanation of the postures of governmental, academic and industrial organizations regarding this potential problem

- The wait and see position now being taken by the FDA and USDA on phthalates pointing out that no reason exists for replacing butyl benzyl phthalate in their packaging applications

- Oscar Mayer should begin a formulation study of Santicizer 334F as a defensive strategy in the event the phthalate status reverses in direction
