FEBRUARY, 1971 PR REPORT
Polychlorinated Biphenyl

Mr. William B. Papageorge - WPAPA

PCB background material was prepared for the Pensacola Plant prior to the appearance of Jim Lipe before the Florida pollution control board. Press queries came from Electrical World on the use of the PCB incinerator; Chemical Week asked what we would do differently if PCB were introduced as a new product today, and Feedstuffs magazine inquired about PCB found in chickens in New York state.
