Summary: After a further reduction in size, the two samples of this mixture of asbestos, wood fiber, quartz and hydrated calcium silicate is toxic on intraperitoneal and intratracheal injection in the guinea pigs.

Did you have anything else from that page?

MS. TOSTANOSKI: Not that page.

MR. IGNATOWSKI: This is page 3.

The chronic effects in the few animals surviving for a month or more are apparently due to the fibrous components of the dust and their nature indicates that asbestos is responsible.

Signed by Dr. Leroy Gardner, Director of the Saranac Laboratory.

MS. TOSTANOSKI: I just wanted to publish the last sentence. Your finger is on it.

MR. SMITH: Sorry, I have to hold it up.

MS. TOSTANOSKI: However, study of the two samples submitted suggest that most of the asbestos fiber is either very long or is composed of unopened bundles of fiber, neither one of which is readily
