No health hazards with Pydraul AC

~~Safe to workers' health.~~

Pydraul AC is completely safe to use in air compressor systems, even in compressors for air masks. Monsanto's manufacturing and use experience indicates that none other than normal safety precautions are necessary.

Normal precautions in handling include avoiding prolonged or repeated skin contact and keeping the material from the eyes. If it is splashed or sprayed into eyes, smarting can result, but there have been no cases of lasting damage. A good washing helps remove the irritation. Physicians have used one per cent pontocaine solution and an opthalmic cortisone acetate solution to relieve smarting.

To illustrate the safety of Pydraul AC, rats survived a six-hour exposure to an atmosphere saturated with its vapors, and those fed 30 grams per kilogram of body weight had no ill effects. These results would be difficult to duplicate in the case of hydrocarbon fluids.
