National Bureau of Standards
Washington 25, D. C.

Your Ref. File No. 4.03

Dear Dr. Dibeler:

As requested in your letter of August 9, 1957, we have shipped to your attention a three-gram sample of trimethyl-iso-propyl lead. However, at the present time we do not have a sample of trimethyl-tert-butyl lead.

Because of the toxic nature of this material it is recommended that it be handled in a hood having a minimum air velocity at the front opening of 125 linear feet per minute.

In accordance with our safety regulations you will find enclosed (1) precautions for handling organic lead compounds in laboratories, and (2) a release concerning the use of the material. Please sign and return the latter to us promptly.

If we may be of any further service to you, please feel free to contact us.

Very truly yours,

R.S. / *[Signature]*
