File

Dr. Ed Eagle of Swift & Company phoned today, November 13, to update us on the status of Aroclor 5460 with the FDA. Although the FDA had turned down their letter petition and asked for extraction data, Eagle was able to talk them out of this. Eagle now feels that they will be able to get Aroclor 5460 back on the approved list for adhesives but it will take an additional 90 days for FDA to approve. The theoretical terminal date of the second ninety days is January 27, 1964 and he will keep us posted.

Eagle also wanted any information we had on toxicity of fumes and I told him that we did not recommend the Aroclors be used over 300°F. without proper ventilation. I transferred him to Dr. Bill Hunt who gave him details of ventilation procedures. In a later conversation with Bill it was learned that Dr. Eagle was satisfied with this information.
