

An IC Industries Company

Memorandum

Date: February 25, 1980
Subject: Delco Brakes in Colombia
From: G. Nicholson
To: B. Iwarsson

Last week our Colombian licensee visited with Delco Moraine in Dayton, as part of their program to make Delco brakes in Bogota. They will be licensed to make the brake, not the friction material.

They expect us to recommend a formula equivalent to what Delco is using right now.

Delco identification is:

Application: Chevrolet C.30
Brake: JB8
Disc Pad Assy: GM 335EE - 9054
GM 335EE - 9073

7163 BX
916-46

This is the 7024A inner and outer.

By copy of this letter to ADI and REN, I am asking what our equivalent material is.

- By copy of this letter to Frank Lee, I am giving notice that here we have another licensee who is interested in non-asbestos!

G. Nicholson
