E. D. Bullard Company  
215 S. Leavitt Street  
Chicago, Illinois

Gentlemen:

We have a letter dated October 27 from your San Francisco office advising us that we could secure from you, one of your air-line hose masks (HM - 30) for purposes of inspection at this laboratory.

We will ultimately require from ten to fifteen masks of this type and consequently would like to inspect all of the available equipment before purchasing. If you will forward one of your assemblies as requested in our original letter, we will be pleased to look it over and advise you..

We note in the second paragraph of your letter that you state that the Bureau of Mines will not approve of masks with more than 50 feet of hose for one man. It is our impression that as much as 150 feet of one inch hose can be used for this type of mask and has so been approved by the Bureau of Mines.

Very truly yours,

WM:vn

Willard F. Machle, E.D.
