The Fibre Handling Task Force has completed a detailed study, comparing the benefits of 3 ply paper bags versus 2 ply paper bags, for shipping asbestos fibre.

The conclusions have shown that there is a substantial reduction in the frequency of damaged bags. Consequently, management were requested and approved the abolition of the 2 ply paper bag.

We are now in the throes of using up the remaining stocks of the 2 ply bags. Once they have been depleted they are being replaced with 3 ply. As a result, various of your customers who have been receiving 2 ply bags will eventually start receiving their shipments in 3 ply. For some grades where the supply is rather limited the conversion will happen very quickly within the next few weeks. For other grades, where a larger supply of 2 ply bags remains, it will take somewhat longer. Nevertheless we expect that by no later than April 1, 1977, all 2 ply bags will have been used up.

Attached is a list of the customers in each territory who have been receiving their material in 2 ply paper bags. Kindly refer to those in your territory and arrange to advise them of this change.

We believe this is a major improvement from the environmental standpoint not only at the customer's end but within our own milling operation.

Please arrange to advise your customers promptly.
