Dear Bill:

After hearing so much lately about PCB I have become interested in doing a little work on these compounds. I don't know which one of the series would be best to work with but I suppose it should be the one that is most widely used.

I would be grateful if we could obtain about an ounce of one of the Arochlors. We would use it to measure the effects of the compound on drug metabolizing enzymes in the liver and interactions with other chemicals. We would be glad to give you the results of these studies.

I suspect that you are receiving numerous requests for information, etc. concerning PCB. It is my impression that this subject is going to receive a lot of attention and I would like to find out whether some of the statements that I have read are correct.

With best regards,

Sincerely,

KPD:CG
