November 4, 1971

Miss Dorothy Crisp, R. N.
Inmont Corporation
837 Buckingham Street
Toledo, Ohio 43601

Dear Miss Crisp:

We do not have any toxicological bulletins on Therminol but we may have some general bulletins and if you will tell me which particular Therminol you use, I will see what I can do.

Should excessive inhalation of any of the Therminols occur over a period of time, the target organ would be the liver and this would manifest itself by a chemical hepatitis. This is extremely rare in industrial experience.

I certainly do not think there would be any cardiac action after daily inhalation of fumes. After you tell me what Therminol you are using, I will be in a better position to evaluate your problem. I would also appreciate it if you would tell me how these fumes are escaping.

Sincerely,

R. Emmet Kelly, M. D.
Medical Director
