20 varied between one-half and two-thirds of the total asbestos content of those products.

The amount of chrysotile in Kaylo 10 and Kaylo 20 varied between one-third and one-half the total asbestos content of those products.

In its response, supplemental response to our interrogatory number 22 where we asked them about the description on the boxes, OCF responded:

Both -- excuse me, to the best of OCF's knowledge, both OCF's and Owens-Illinois' names appeared on packages of Kaylo distributed by OCF from 1953 to 1958.

In a document we have marked as Plaintiff's Exhibit OCF-353, this is an internal OCF memo dated November 8, 1966, and I apologize I didn't put it on the overhead, it is just one sentence.

This is a memo from an official in New York, Mr. Johnson to OCF officials in Toledo and New York.

The memo states, "Asbestos content of Kaylo is about 15 percent, composed of 12 to 13 percent amosite mined in Africa and 3 percent chrysotile mined
