Confirming our discussions there may be a need to analyze used PCB fluid from other sources besides heat transfer for chlorodibenzofurans. If you want to pursue analysis of scrap capacitor, transformer and Pydraul fluids please alert Paul Gann. He will arrange to collect such fluids from material returned to Sauget for incineration and deliver the samples to Scott Tucker.

Paul will also obtain a case history of each sample from JJR/DER (Heat transfer), PGB (dielectrics) and JHD (Pydraul).

I understand you are still waiting for case histories on the heat transfer samples and I ask Paul to follow up on these for you.
