

NORTHWEST ENVIROCON, INC.
REYNOLDS METALS COMPANY
SHERWIN PLANT

AREA SAMPLES

Samples have been collected and analyzed at Reynolds Metals Co. - Sherwin Plant from April 1990 to June 1994. None of the samples analyzed during this time frame have been above the action level of .1 f/cc. The majority of these samples represent fiber counts outside of an abatement project, outside the regulated area.

For the purpose of this study, these samples provide two points of information:

1. Fibers did not migrate out of the regulated area during the abatement.
2. The ambient environment of these areas had very low fiber concentration.
