(b) (i)-(iii): See Answer to Interrogatory no. 10(a).

(iv) None.

(c) All automotive and off-road friction products manufactured by Abex contained approximately 25-65 percent chrysotile asbestos only.

(d) Brake lining material is shaped into curved, linear segments in such physical dimensions necessitated by the specifications, characteristics and use established by the manufacturer of the vehicle or the equipment on which the lining material will be applied.

Brake pads are basically rectangular in appearance and are composed of a lining material adhered to a metal mounting plate.

All Comet brake shoes had the word "Comet" stamped on the outer side of the product.
