Ford Failure to Comply With OSHA Regulations/Failure to Monitor Exposures

Date:1984

Author: Roger Wabeke, Industrial Hygiene Section

Document: Letter to Managers of U.S. Plants and Other Facilities

A Company facility recently received an OSHA citation for failure to monitor airborne concentrations of asbestos during a maintenance operation. Two other facilities have since been warned to monitor exposures during maintenance operations or be cited. In conversations with OSHA, they stated that without monitoring data that characterizes employee exposure levels, work practices mandated by the OSHA asbestos standard cannot be correctly specified.
