

July 22, 1936

Mr Robert A. Kehoe,
University of Cincinnati,
Cincinnati, Ohio.

Dear Doctor Kehoe;

Thank you very much for the letter and reprints, I have read them all over and the article you recommended and although I still think that the man in question has an increased density of the bones X-rayed, I cannot say that it is due to lead poisoning. I do believe he has a sensitivity to something in the products or a skin that cannot stand much abuse. Thanking you for your interest in this case and if I can be of any service to you, please let me know.

Sincerely,

H. Penfield Jones, M.D.
