REDDAWAY MANUFACTURING CO., INC. 32 EUCLID AVE., NEWARK, N. J., U. S. A. (201) 589-1410

PRODUCT INFORMATION SHEET

MATERIAL IDENTIFICATION - Type RNAW (Reddaway Non Asbestos Woven) Brake Lining

MATERIAL DESCRIPTION - A woven non asbestos brake lining. The carcass consists of brass wire inserted yarns containing a mixture of organic and inorganic fibres including Kevlar. The woven tape is vacuum impregnated for thorough saturation with an oleoresinous compound. Long slow curing with alternate rolling and compressing and a final high temperature step cure bonds the material into an extremely dense and strong product with excellent friction and wear characteristics. Surfaces are ground to + 0.005" of finished thickness.

MATERIAL USE - For band brakes and band clutch service. Also general use where a high friction lining is required. Material is flexible and may be formed to radius cold or with heating to 250° F. May be used on steel or iron drums.

COEFFICIENT OF FRICTION - 0.40 normal hot-constant velocity. Friction will be higher at ambient temp. and will vary slightly depending upon pressure and velocity.

OPERATING TEMPERATURES - Should not exceed 500° F.

MAXIMUM LOADING - Not to exceed 100 PSI.

SIZES AVAILABLE - Widths to 20" wide ground. Thicknesses - 1/4" 5/16", 3/8" , 1/2". Other thicknesses will be available subject to demand. Inquiries are welcomed. Normally furnished in 25 foot rolls. Special lengths and flat sheets are available.

GENERAL INFORMATION - This material is intended for use as a substitute for regular RBW (Woven) where conditions require an alternate type. It has been field tested for four years on varied applications. Friction, heat resistance and wear rate are good however extremely high operating temperatures should be avoided.
