Attached for your information is a copy of the EPA letter sent out on August 16 to all of our dielectric customers on PCBs.

While the copy is one we obtained from Westinghouse, I am certain that it was sent to all of our customers. Bill Papageorge tells me that one of the interesting aspects of this was that the EPA had many different sources and names and while they operated from the Corporate headquarters list that we gave them, in many cases they wrote directly to the plants involved and to specific individuals. Therefore, as we suspected, the government intelligence is quite knowledgeable as to who the customers are and where.
