Bob -

I am trying to assess my teaching capacity for next year if I stay in Chicago.

Would you be interested in retaining me as a consultant for the purposes of (1) instructing the fellows in a) the pathogenesis, physiology & recognition of industrial diseases of the lung, b) conditions associated with the transport of blood gases, c) conditions associated with histotoxic anoxia & d) biometrics; & (2) acting as a consultant in the design & evaluation of experiments?
