THOMAS W. MULLEN, JR.
TEXTILE FIBERS DEPARTMENT
WAYNESBORO

ASBESTOS

Enclosed is a copy of the paper by J. R. Lynch and H. E. Ayer, "Measurement of Asbestos Exposure," which describes a method of collecting dust samples by membrane filter and counting by phase contrast technique.

In addition to the description of the method, I am sending you also an announcement of the Asbestos Dust Conference which we propose to hold in Wilmington in the near future, along with copies of correspondence about this Conference which have come to me from R. E. Hayden, Textile Fibers, Wilmington. You will note that the addressee of the Hayden letter to Waynesboro was R. H. Stamm.
