

November 2, 1946.

Mr. W. E. Yates, President,
Chicle Development Company,
500 Fifth Avenue,
New York City.

Dear Mr. Yates:

Re: X.

I have received the attached statement from Mr. Wharton relating to the chemical removal of "X" from maple products. They are the products to which Mr. Wharton referred and which he previously declined to name.

We should have the opinion of our experts whether this method is effective as to chicle, as soon as may be. I have promised to inform Mr. Wharton of it. Upon that opinion we shall determine our next step accordingly.

As I have written you: we can only secure the release of the detained chicle upon the basis of our action in cleaning it which establishes, by government analysis of the cleaned chicle, that it is not offensive to the tolerance.

Sincerely yours,

Charles Wesley Dunn
